Reinventing for the Service Economy

In 2020, the COVID-19 pandemic completely altered the working and learning landscapes. So many are working and studying from home, and standards and needs have changed. E-learning took a step up as schools and colleges closed and needs for more accessible and interactive ways to learn became visible early on.

From this, the idea to set up our own academy arose, and thus, the Cooler Master academy freshman year is in full swing. This space gives back to our younger demographics what the pandemic took away from them.

We want to give people the tools, know-how and opportunity to come up with great ideas to share with the world by offering personalised learning, mentorship and business cooperation opportunities to really allow young audiences to get in touch with their entrepreneurial side. This is achieved by granting access to Cooler Master's vast array of resources that we've built over the past 30 years with engineers, designers, marketeers and sales experts available to provide feedback to bring their ideas to life.

Besides the mass migration we noticed in recent years we also noticed that consumer behaviors from the PC gaming and tech community was shifting from a 'product economy' to a 'service economy'. Based on this change we took it upon ourselves to create a new business unit that focuses entirely on forming strong interaction and engagement with younger generations, and so Master XP was born.

Master XP's goal is achieved by integrating various online/offline gamification methods as well as creating a global channel through entertaining and immersive gaming experiences.

We introduce and develop brands in the gaming and esports industry, combining the world of gamification with two strategic areas of focus, entertainment and communication. This creates greater exposure from exciting events and engaging programs to attract larger crowds of a younger demographic.

But when looking at our community, we also noticed something else; The need to have exclusive ownership. 20 years ago, we couldn't imagine that someone would pay to have an exclusive in-game skin, and a couple of months ago the world didn't even know what NFT's were. This behaviour will continue in the gaming domain when it comes down to owning exclusive systems. That's why we've created the CMODX platform.

CMODX is the personalize & performance division of Cooler Master, where you will find premium made, custom-like PC builds that are designed and curated by the industry's most innovative and creative designers from the likes of AKMod, Inony, Timpelay, specializing in cross-industry collabs to bring the freshest ideas to life.

As we move to the next era as a Tech lifestyle brand, we embrace open collaborations with talents and brands to bring something spectacular (in both style and performance) to the market.

Working hand-in-hand across different businesses, platforms and service models on Cooler Master's platform, we will re-invent and define the immersive work and play experience from the product level all the way to how consumers engage and interact with our brand.

While it's hard to predict the future, when you look up into the dark night sky in 2041 to look at the cosmos, it very well could be our COSMOS 50th year anniversary edition! 🇮🇳

Technology. Where would we be without it, right? We're living in an age where the tech industry is consistently enhancing the way we live our everyday lives, from smartphones to smart cars and everything in between.

Cooler Master has been a well-known PC components solution provider for almost 30 years now. And as the PC market is getting more competitive and versatile, we're expanding our product portfolio and transforming Cooler Master into a tech-lifestyle oriented brand.

We'll be focusing on three key areas – Immersive Experience, Cloud Gaming and Advanced Computing. Through innovative design and craftsmanship, hardware and software integration such as lighting, sound effects, control interface and ergonomics to elevate user experience on visuals, audio and overall comfort.

We're witnessing technology advance at an exponential rate, and with disruptive technology emerging faster than ever, VR, 5G and AI are all revolutionising our industry at this very moment. With everything we've seen in the past 20 years, it really is hard to predict the direction in which the technology industry will progress. What is sure is that since technology is built to solve and satisfy human needs, the driving force of our industry, will be to design products that make human life easier and more enjoyable.
