

Njori Tempo

Funding: US\$ 123,003 pledged of US\$ 70,982 goal

Link: <http://dgit.in/NjoriTempo>

If, like us, you struggle with creating the perfect meal, the Njori Tempo could help. The device is a smart cooker that allows users “complete control” over their cooking. It is an all-in-one smart cooking gadget that offers temperature control, and even comes with built-in scales to measure ingredients. The device houses a direct contact temperature sensor that continuously monitors the pan temperature as you cook. It is capable of regulating temperature to maintain

your desired heat level. The Njori Tempo also comes with three preset modes paired with temperature probes to aid the process of cooking. There's a Sous Vide mode, Deep Frying mode, and Slow Cooking mode. The built-in scales allow you to weigh ingredients before and during cooking. The device has a sleek-looking magnetic dial that allows users to set the pan temperature and has a pretty sizable screen that offers useful information and houses controls. The device is also compact enough to store or transport with ease. If you wish to snag one for your kitchen, it is available on Kickstarter for £359.

Capsule

Funding: US\$ 343,217 pledged of US\$ 99,375 goal

Link: <http://dgit.in/Capsule>

Washing dishes is never the most enjoyable process, so dishwashers can be pretty handy to take care of this mundane chore. However, not everyone can install a full-size dishwasher in their kitchen, especially in metropolitan areas with tiny, matchbox-sized apartments. Enter Capsule, an innovative countertop dishwasher that is specifically designed for small kitchens but can still incorporate large plates, pans, and chopping boards. Brought to us by Loch Electronics, the Capsule is a three-in-one multi-functional device with a dishwasher, a UV light disinfection cabinet and even a fruits/vegetables washer! All in one small, countertop gadget. Moreover, the dishwasher can work with or without plumbing, meaning you can carry it around with you and use it anywhere you like. The dishwasher allegedly has enough space to wash two meals worth of dishes within just 15 minutes. You can use the Capsule on the go with the included 3 litre water tank. When one cycle is finished, the device drains the water into the sink. If you're using it at home, you can also plumb it in. The dishwasher has four modes - UV cleaning, Fruit Wash, Heat, and Soap. The UV cleaning mode can be used to disinfect daily use items such as face masks, keys, smartphones, and others. The Heat mode heats up the water for sanitising and convection drying, while the Soap mode washes the dishes with dishwasher soap.

CharisMatic

Funding: US\$ 34,187 pledged of US\$ 7,000 goal

Link: <http://dgit.in/CharisMic>

If you wish to stand out in your videos or vlogs, the CharisMic is a unique and quirky magnetic lapel microphone with a bunch of custom badges that is definitely unlike anything we've seen before in this space. This innovative lapel microphone combines a magnetic clip with customisable badges to up your style or quirkiness quotient. The device uses a magnetic swap system that allows you to set up the microphone in a matter of seconds. You simply place the microphone under

your clothes so it remains hidden, and then stick the custom badge on the top of your clothes to secure it in place. That's it. No clipping the mic to your clothes, no exposed wires, just a simple and clean look. If the badges aren't your style, the company has a magnetic holder option, where you position a magnet under your T-shirt and simply position the mic on to your clothes where the holder is placed.

The retail box contains four magnetic badges, a Lavalier microphone, three wind muffs, a magnetic microphone holder, a magnetic clip, 4 to 3 pin adapter, an extension cord, and a pouch. There's also an Invisible Tape patch that can be used to directly stick the microphone to your body. The company claims that the magnetic nature of the device doesn't interfere with sound whatsoever.
