BenQ GS2

While the projector is small, it isn't the smallest we've seen. It won't fit in your pocket and comes with a nice travelling bag to house the projector and its accessories. The projector is extremely well built and can withstand a drop of 0.5m. It is also IPX2 splashproof so if you are using this on an outdoor picnic, you have some time to pack it up if it starts raining. The projector has a unibody structure and a soft rubber finish all around. The lens is in a protective housing in the front.

The top of the projector has the power button, LED indicators for the battery level, IR receiver, directional buttons and an OK button along with back, home and menu buttons. The buttons are nice and clicky and seamlessly

blend into the design of the projector. The back of the device has an exhaust vent and two 2W speakers. There is a slot for the wireless dongle, a 3.5mm port, HDMI port (HDCP1.4), USB-C port for an external display and a USB Type-A port. The power port is at the back below the exhaust vents. The power port is magnetic just like Apple's MagSafe port on the older MacBook Airs.

We ran a bunch of content on the device from different streaming services. Testing the performance of the

projector we found that it doesn't stand toe to toe with its larger home theatre brethren, but what it offers is a compelling performance for those looking for a projector on the go. The ideal size for the screen is under 50-inches. The sweet spot is 40 to 45-inches. Beyond that, you will be able to make out the jagged edges in content more prominently. The projector gives you a bunch of picture settings to choose from such as Bright, Vivid TV, Cinema, Camp Fire, Bed Time, Sports and User.

When it comes to audio, the projector has two 2W speakers, and their output is average. During a movie don't expect to hear the bangs and swishes in detail. If you watch a show like Young Sheldon or Our Planet, you can hear the conversations and voice narration quite clearly. But in a large open space, don't expect the projector to have immersive sound. For the most part, we connected a pair of Bluetooth headphones to the Fire TV Stick and that got the job done quite well.

Goqii Vital 4.0

The GOQii Vital 4.0 is the latest fitness tracking band from GOQii in their Vital line-up. Out of the box, it comes with Black, Purple, and Red strap colour options, and it's nice to be able to switch between them, in case you're someone who likes to mix and match with your outfits. The Vital 4 comes with an SPO2 monitor, so you can check your O2 levels with this tracker – a feature that's fairly handy to have nowadays.

The Vital 4 has an AMOLED colour display at a resolution of 120x120p. The tracker is also IP68 water and dust resistant. In addition to the SPO2 monitor mentioned above, the GOQii Vital 4 can also monitor Blood Pressure (additional steps are needed for this one, including pairing the device with the app), monitor your heart rate, and even your temperature, 24/7. Additional features include a music finder, phone finder, and being able to display

notifications for messages, calls, chat apps etc.

Once paired with the GOQii app, the Vital 4 can start recording and tracking data for you. We've already mentioned the health vitals it can track above. In addition to that, there are also 17 sports modes that you can choose from to record activity. These include walking, jumping rope, aerobics, relaxation, tennis, cycling, workout, climbing and more. The app itself is where

you be able to analyse your collected data, additionally, the app also offers personal coaching and classes.

Finally, coming to the battery, the GOQii Vital 4 can run for around 10 days on a single charge, however, with all functions enabled, i.e., 24/7 heart rate, SPO2, temperature etc tracking turned on, the battery lasts for about 2-3 days. You can mix and match the functions you want enabled to pull some more out of the battery.
