You have to try these games out on your smartphone!

Team SKOAR!

Ni no Kuni: Cross Worlds

Cross Worlds is a break from Ni no Kuni's prior games, which took place in a classic fantasy setting and rather presents a science-fiction twist. This time, the player is a regular person who is beta-testing a new virtual reality game called Soul Diver that transports them to Ni no Kuni which turns out to be the genuine world of Ichi no Kuni (meaning one-nation). Cross Worlds appears to be on par with previous console releases and while being 3D, the characters resemble 2D sketches from anime, giving it a nice little interesting appearance.

The player is able to choose from five different classes - Rogue, Destroyer, Witch, Engineer, and Swordsman; each with its own set of configurable traits of customization from haircut, to eye colour. You

take on the role of a character who enters the virtual reality world and is immediately pushed into a battle you have no knowledge of. The combat is skill-based, with each skill housing varied cooldowns. You'll also be accompanied by a "Imagen" or companion dog, who will automatically deliver damage to your opponent in battle.

The game, being an MMORPG, also offers large-scale PVP with up to 100 additional players, dubbed the Battlefield of Relics for the time being. Two teams will compete for territories that will earn points for them. There are monsters that can appear on the map that you must defeat. Otherwise, you can use barriers to obstruct your opponents' paths. There

are also co-op raid battles with up to five individuals in a party, and four difficulty levels to choose from. It should be noted that the game isn't available yet to play in India, and is only available on iOS devices with accounts in Taiwan and China.

Sword Art Online Black Swordsman: Ace

SAO:BSA is characterised as a full-fledged MMORPG based entirely on the SAO virtual MMO. It follows the anime's plot, particularly the Aincrad Arc, in which players are stuck inside the game, where if they die inside SAO, they die for real, and the only way to exit the game and survive is to fight Aincrad, the iconic sky fortress with 100 stories. The game is situated in an open-world environment, and sets off in a similar setting as SAO:IF, but with gorgeous graphics and a

more cartoonish touch. The UI is familiar too, where the attack and skill buttons are on the right, your movement is on the left, and a menu option to the right.

Your main goal is to traverse a hundred floors in an open environment while completing tasks/quests and conquering the floor bosses native to the floors. In addition, each floor will introduce you to new challenges and characters, including the ones from the original SAO series, with whom you can interact with. Overall, it settles as a nice improvement over SAO:IF in terms of both the gameplay and graphics,

though we felt like the story could be delivered a bit better. Also, it would have been a nice addition if they offered to migrate data from Integral factor for the players switching to Black Swordsman Ace.

Mad Skills Motocross 3

Mad Skills Motocross 3 is a side-scrolling arcade racing with easy-to-use controls. The goal is to maintain your orientation over jumps so that you don't wipe out when you land, and maintaining a smooth and fault-free run is how you get to the podium. It begins with the biker at the start line sprinting at full speed towards the right, striving for first place. Accelerate, stop, and weight shift buttons are displayed on the screen (and may be customised), and you use them to keep your rider upright and moving as quickly as possible. Failure results in a

restart and the loss of XP and cash to spend on the bike and personalization. It has an extensive campaign in about 8 regions around the world offering a wide variety in terms of tracks. Upgrading the different elements of your vehicle is done with the coins you gather; you can spend either silver or gold coins. You may spend the more easily acquired silver coins and parts will open up over time, or you can pick the rarer gold coins and the parts will unlock instantaneously. The

game is engineered to make the players shed money for upgrades with over the top freemium practices baked into the game polluting not only the gameplay but the UI experience as well. The cash grabbing nature of the game makes it hard to recommend.
