

SECURITY WATCH

EA ignored vulnerabilities for months

EA allegedly ignored warnings from security researchers that could have prevented intruders from gaining access to its systems which resulted in a massive data breach. Earlier this month, hackers were able to gain access to EA's corporate network and steal about 780GB of source code, SDKs and other proprietary tools. Israeli cybersecurity firm Cyberpion has revealed to ZDNet that it had reached out to EA last year and cautioned the company about ten times that several of its domains could be subject to takeovers. According to Cyberpion co-founder Ori Engelberg who spoke with the news outlet, EA did not do anything to address the issues the firm had discovered even after it sent over a detailed report. A report published by Motherboard days after the data breach came to light revealed that the hackers responsible used stolen cookies and communication software Slack to compromise one of EA's employees to provide a login for access into its corporate network.

MOBILE WATCH

OnePlus Nord 2

OnePlus Nord 2 could launch by the end of July in India. Some alleged renders of the OnePlus Nord 2 have been leaked, suggesting that its design is heavily inspired by the OnePlus 9 series. The OnePlus Nord 2 is expected to feature a 6.43-inch Full HD+ display that uses an AMOLED panel with support for up to a 90Hz refresh rate along with an in-display fingerprint sensor. Previous rumours indicate that the Nord 2 could be the first OnePlus phone to be powered by the MediaTek Dimensity 1200 processor and will likely be offered with up to 12GB RAM and 256GB storage options to choose from. There could be a 50MP primary camera, an 8MP ultra-wide-angle camera and a 2MP macro camera. The front-facing camera is expected to be a 32MP unit. The OnePlus Nord 2 could be equipped with a 4,500mAh battery that will likely support fast charging.

APP WATCH

Moises

Moises is an AI-enabled vocal remover and mastering app available for both Android and iOS devices. It has similar features to its web version. One of the most useful features is track separation where the software leverages the power of AI to separate the audio tracks between vocals and individual instruments without the user having to do anything manually. Free users can process up to five media files of

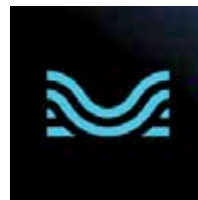

five minutes length per month, so it's a pretty good option if you're just starting out. The app also comes equipped with exclusive modes such as playback speed control, pitch shifting, and smart metronome. Smart Metronome is a feature where AI identifies the beats of the music and automatically generates a click track that plays in perfect sync.

Another feature available on the app is the ability to follow the chords of any track in real-time. The app identifies all the chords of the track and will display them in sync with the music. Chords are also automatically

transposed when the user changes the pitch, which is pretty convenient. Moreover, users can split their tracks and even save them to listen to them in

offline mode when they're not on an active internet connection. Should you choose to go with the premium plan, you will have unlimited uploads of files up to 20 minutes of duration and the files can be

downloaded and exported in MP3 or WAV format. You also get access to other premium features such as access to all speed options, access to all tone change options, unlimited file uploading and processing, and more.

Spacecraft AR

Created by NASA's Jet Propulsion Laboratory, Spacecraft AR is an app that uses mobile AR to bring spacecraft explorers to life. You can view the shrunk down or full-size versions of spacecraft right in your living room.

Nerdy News

Nerdy News is a news aggregation app that collects comics and superhero related news and shrinks them down to a 60-word copy. They have an infinite swipe up feature as well, so you can keep reading until you're satiated.

Tusk

Tusk is a flexible task scheduler that helps users be more organised in their day-to-day lives. It helps with keeping track of your daily tasks, allows you to build schedules, set notifications, and track the execution of tasks.
