US president Joe Biden addresses ransomware attacks as rising national security concern. <https://dgit.in/jul21-34>

More Nexus startups

Pushing the next big idea to market

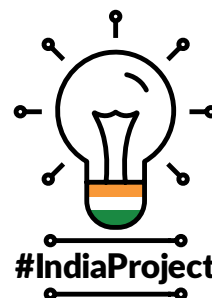

Aditya Madanapalle | aditya@digit.in

Nexus is a startup accelerator that is a collaboration between the US Embassy, New Delhi and the Alliance For Commercialization and Innovation Research. With collaborations with local organisations, access to networks of investors, training from commercialisation experts, and an extensive mentor network, the initiative has grown to become one of the top incubation

programs in the country. The priority is to pick an interesting concept and help it reach the market as fast as possible. These are cutting edge, innovative solutions to every problems. Here we showcase interactions with some of the most interesting startups associated with Nexus.

URBAN AIR LABS MAKES NATURAL AIR PURIFIERS

The heightened concerns around maintaining the air quality in indoor spaces after the pandemic has boosted the air purifier product category, and Urban Air Labs is entering into the space with an innovative technology that uses living, breathing plants for filtration of the contaminants. The resulting

air purifier can also be described as an IoT plant, which has the added benefit of reducing the build up of carbon dioxide. The purifier works at one fifth the energy requirement of other comparable purifiers on the market. The first thing we wanted to ask Urban Air labs is if their purifiers had been tested for effectiveness, "Ubreathe has been tested at NABLs certified lab to certify the efficacy of PM2.5 contaminations in controlled environments. Apart from the third party certification, the product has been extensively tested
