

Facebook ads in VR

Facebook's attempt to bring ads to the Oculus VR platform doesn't seem to be off to a great start. <https://digit.in/jul21-35>

Massive LinkedIn data breach

700 Million LinkedIn account records went up for sale on a hacker forum. <https://digit.in/jul21-36>

Urban Air lab's air purifier

in our Gurgaon based in-house testing lab facility. The overall objective of the product is to provide a solution for a conventional household in metro cities in India – with that in mind, product's effectiveness is tested not only for the dust pollution but also on the gaseous and biological pollution in the air.”

We then wanted to know what the energy was actually consumed for, “Ubreathe uses its patent pending ‘Breathing roots’ technology to purify the air from the surrounding. The energy consumption is required to activate the machinery inside the smart pot that enhances the purification capacity of the plant.”

Then we moved on to perhaps the most interesting question, the IoT capabilities of the unit, and how the plant was actually made smart,

The fan filters the air through the living roots of the plant

“with IoT, Ubreathe is enabled with smart control options and most importantly it provides essential information about the air quality in the house, health status of the plant (in future) and gives critical alerts in case of air pollution spike.

Ubreathe is a smart pot as it comes with a mobile app that completes the information feedback mechanism for the user.”

Urban Air labs has big plans for the future, with products aimed at both residential and commercial areas, “we are building a niche market of ‘Air wellness’ space for everyone. On the same line, we are launching our next generation product in August 2021. The information and first look of the product would be out in the month of July. The product would be made available in pan India.”

Finally, we asked about the experience of working with Nexus, “Nexus has been an important contributor to our journey. With the right set of experts and organising team, Nexus has been able to find the perfect engagement for the young entrepreneurs. We learned so much from those weeks – all the learnings are coming to our use when we find ourselves in the growth phase.”

PROTRAINY BRIDGES THE GAP BETWEEN DEGREES AND CORPORATE REQUIREMENTS

Protrainy is an upskilling institutions that is currently focusing on placing civil engineering graduates, but moving on to other non IT engineering specialisations. The magic happens in the design of the upskilling courses, which are crafted based on industry requirements, allowing Protrainy to make candi-

dates meet the requirements for being placed in these companies. We asked Protrainy to explain the work that they do, “Protrainy is helping the young graduates of non IT specializations (with our current focus in civil engineering and future plans to proceed in all specializations) to get the Industry Ready training and help them get their first employment in a salary range of INR 15-25k per month. We are targeting tier 2 and tier 3 cities and institutes that we call Bharat. We are also helping existing work force to learn latest technologies and helping them upskill or even pivot careers.”

We then went on to ask about the process of identifying and developing a new upskilling course, Protrainy told us, “We bring working professionals to design courses together

The air purifier reduces carbon dioxide buildup in the room.

with our product team inline with latest corporate requirements. The courses are designed in such a manner that the skilling is done to create plug and play entry level professionals. The trained professionals are saving cost to the companies in upskilling the fresh graduates and paying the hiring agents get the best fit results.” Protrainy also provides lifetime access to some resources, “all our courses are live with assignment, mini project and 1-1 interaction and doubt clearing so that the learning curve is top notch. Recordings of every session is available to learners through our inhouse Learning Management System even after the session completion tenure. Other resources include handwritten
