

SET REPEATED CARDS

Trello has a host of 'Power-Ups' which basically are additions to your existing workflow, which help you make the most of the app by setting certain things to happen which would

do, and as they say, 'Enjoy the finer things in life, at least your Trello life, with a butler for your boards to do the heavy lifting.' The process for adding this Power Up is the same as above, just search 'Butler' once you are in the search

Here's what shows up when you click on a card in Trello

normally need to be done manually. One of this is the Card Repeater, which helps you make a card repeat again and again on a fixed schedule which can be customised making sure that nothing goes unnoticed. For setting this up, you will need to click on a card, then select the Power Ups option, which will appear on different locations based on your device, for PC users, it's on the right-hand pane of the card menu. After that, you will need to click on the search bar which appears after you have entered the menu of the Power Ups in this app. There you will need to search for 'Card Repeater', and simply click add. When this gets added, just return to the card, click on the Card Repeater icon which would have come up, and set the schedule which you want the card repeat cycle to follow.

AUTOMATE YOUR TASKS

There's another neat addition to the Trello App which can be used to automate everything that you want to

menu. Then you will need to click the List that you want to add the automation to. Then, select the Automation option that shows up in the menu that opens up. Then press the 'Add Trigger' button to start setting up your automated tasks. It will show you a set of recommended triggers and even let you configure your own triggers. After you have set up the trigger, you will have to set up the action that is performed after the trigger has been activated. The same process can be used to set up the action too. Once this is done, you would be set with your first automated process on Trello.

MAKE MIND MAPS

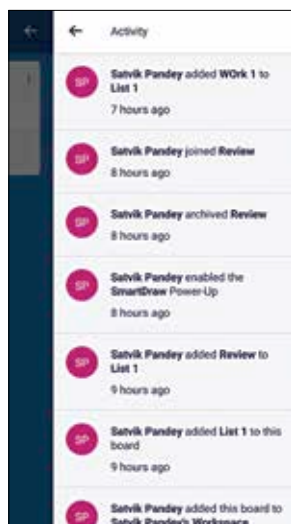

Mind maps have been something that everyone from a student to a working professionals tend to make in order to make understanding things easier. Well, Trello has its users covered on that part too. In order to make a Mind Map in Trello, there are two ways, the first one is to do it manually, or

have a Power Up do it for you. And, we will be talking about the second way, since it's much more convenient than the first one. So, what you need to do to make quick and effective mind maps is use the Power Up called SmartDraw. Once you have enabled SmartDraw, the rest of the process is relatively intuitive. Once the Power Up has been added, you need to use it to create a diagram or chart, that would add a lot more clarity to the cards that you have in your list. The Power Up takes relevant data from your cards and groups into the chart type of your liking.

COLLABORATE AND ADD MEMBERS TO YOUR TEAM

Trello has a neat team building feature that lets you add people to your workspace with different permissions. You, as the admin of the workspace will have to add these users individually, defining their roles on a pro rata basis. You can add members using the invite function in the Members tab of your workplace, which

The activity pane that lets you keep track of the changes made to your workspace

will let you generate a link to share with a group or add individuals using their email IDs. Moreover, if you want to have someone on the team for a short period, you can have people over in your workspace as guests, who have limited access and permissions to your workspace on Trello. You can also sync your workspace with Slack, another team and project app, which would help you coordinate and distribute work in your team more easily. For doing this, all you will need to do is go to the settings tab of your workspace, where you will find the option to integrate Slack with Trello.

FOREST: STAY FOCUSED

An individual centric service that lets its users monitor their working hours and patterns using the tree growth inspired interface, Forest: Stay Focused has been the go-to app for individual workers be it students or professionals alike. Whether you want to just time your work sitting, or time a social interaction in order to maintain a healthy daily time structure, Forest is there for you. Here are some features or hidden tweaks that you can do in order to make your time spent in the app bit more convenient and intuitive.

CREATE TAGS FOR EASY IDENTIFICATION OF TASKS

We have all been in that situation when an important task gets lost in the sea of the ones that we execute daily and it becomes a pain to accurately observe our patterns because nothing is labelled. The devs of Forest
