

The slide in menu in Forest

have a built in tag system that would allow users to segregate the different tasks that they are keeping a track of using the app. In order to create a tag in addition to the 7 that are already there, you will have to open the app and click on the three bars on the top right corner of the screen and a menu would open with the 'Tags' category there. Open that and you will be greeted with the pre-existing tags. To create a new tag (premium feature), you will have to tap the search bar, and type in the tag name that you would want to create and click the 'Create Tag:' option. After this, the app will prompt you to choose a colour. Once that's done, you will be all set to add tasks under this newly created category of yours on Forest.

KEEP A TRACK OF THE EXCEEDED TIME

Your standard stopwatch or timer does keep a track of your time, but at times, it does become a pain to keep a track of the time that you used up past your designated time. For this, you can use the inbuilt timer of the app and use it to calculate the time that you used up over what you had sanctioned for a task. To access this feature, you will have to click on the top center icon on the app home, represented by a sand clock and fire, and toggle on the Count Exceeded Time option and you are all set and ready to go. Once your tree has grown, you can have a look at the time that you used up in total while working on the thing that you were involved in, either in the Timeline section or the Forest sec-

tion of the app, where you examine the timing of each session. Without this option turned on, Forest will only time you up to the duration you set in the first place.

PLANT A TREE TOGETHER AND HELP IT GROW

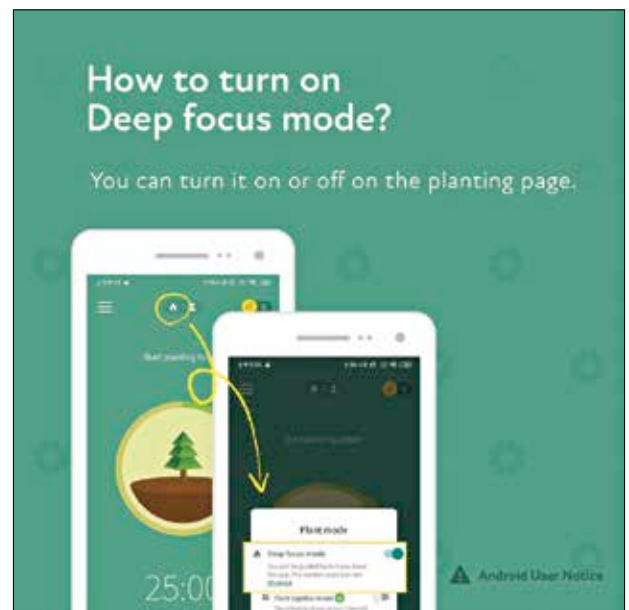

Group study or brainstorming sessions are known to spiral off on a different tangent, sparking a debate on unicorns in the midst of what was supposed to be a session for understanding... physics. But, when using Forest, you can invite your friends or colleagues over in a room, where there would be a restricted environment. For creating a room, head over to the top of the home screen of the app, where when you click the icon with the sand clock and fire, you will get the option to toggle "Plant Together". Turn that on and you are all set. Just share the room code with your friends/group. If anyone in the rooms breaks their focus, which means does anything that is not per-

mitted by the app, during the time that has been set for the room, the entire room would lose progress and the tree that had been planted for the group will be dead. This adds a lot of accountability and is something that a lot of team leaders out there must be on a hunt for.

ENABLE DEEP FOCUS

There are some of us out here who cannot resist leaving a focus app and moving onto the next, in spite of having pledged to themselves at the start that, no matter what, we wouldn't leave the app until the work was done. Even the standard settings on Forest allow you to do so, and thus it's easy to just press the home button and slide into the Instagram feed that serves you with the recipe of a dish that you have never heard about. So, in order to fix this, as an addition to the app, 'Deep Focus' mode has been added to make sure that any activity that causes you to leave

The forest guide to turning on Deep Focus
