

No Win.10 start menu hack

Microsoft no longer allows users to restore the Windows 10 Start menu in Windows 11. <https://digit.in/jul21-95>

Win.11 won't be a forced upgrade

Microsoft explains that users need to manually check for the update on their devices. <https://digit.in/jul21-96>

OnePlus U1S 65-inch TV

Could have been a great option for the price

Price
₹68,999

OnePlus launched its U1S series of smart TVs available in 50, 55 and 65-inch screen sizes priced at Rs 39,999, 47,999 and Rs 62,999 respectively. Let's find out how the 65-inch OnePlus U1S TV we received performs.

BUILD AND DESIGN.....72

pretty good. From the reproduction of colours to even the skin tones in some sequences, the content was enjoyable. While the HDR 10+ preset yielded good results for consuming HDR content, our Calman HDR Toolkit Analysis shows us that the HDR 10+ picture preset has a cool bias to all the

colours. The Colour checker analysis tells us that there is a Delta error of 3 on average. But in HDR there is an average error of up to 7 which is high. But, considering the price of the TV and the performance we experienced, only those with an eye for colours and details will see the difference.

The SDR playback from streaming services like Netflix and Prime Video is also good. The content looks crisp and enjoyable to watch.

Just like the Redmi TV, the OnePlus U1S supports HDMI 2.1 with ALLM only. The display has a refresh rate of 60Hz and the HDMI input recognised the PlayStation 5 when plugged in. We played a bunch of games on the PS5 on this TV including Spider-Man: Miles Morales, Dirt 5, and more. Gaming on this TV is a visual treat with good particle effects and decent black levels.

AUDIO PERFORMANCE

The audio performance of the TV is a

mixed bag. There are times when the TV sounds excellent and times when it sounds bad. In a game like Dirt 5, the TV almost had the performance of an entry-level soundbar. On the other hand, in a movie like Mission Impossible on Netflix, while the sound effects and crashes were good, the dialogue was absolutely inaudible even after bumping up the dialogue enhancer to the high setting. OnePlus has issued an update that addresses the issue. We noticed some improvement in the sound output of the TV, but it isn't perfect and there are still some pieces of content which exhibit the audio issue.

REMOTE CONTROL

OnePlus has yet again redesigned the remote control it offers with the TV. The U1S comes with a remote control which is well built and ergonomic, but the buttons feel a little all over the place.

You have to long-press the menu button to bring up the settings options. The OTT hotkeys are next to each other but the Android TV UI and Oxygen Play UI button are quite far apart.

VERDICT

We really like the panel of the OnePlus U1S. It produces good colours and works well for a variety of content. But giving it an outright recommendation is tough. The speakers sound excellent for some pieces of content while on others they fall flat. While the TV does not support Dolby Vision, you can connect a Dolby Atmos soundbar to it via eARC. The gaming performance of the panel is good too.

—Sameer Mitha

SPECIFICATIONS

PANEL SIZE: 65-inch (available in 55 and 50-inches as well) | PANEL TYPE: IPS panel with D-LED backlighting | PANEL RESOLUTION: 3840 x 2160 - 4K | PANEL REFRESH RATE: 60Hz | HDR 10 SUPPORT: Yes | HDR 10+ SUPPORT: Yes | DOLBY VISION SUPPORT: No | WEIGHT: 9.7 kgs with stand | HDMI PORTS: 3 | USB PORTS: 2 | BLUETOOTH: Yes | WI-FI: Yes | ETHERNET: Yes | SPEAKERS: 30W | BUILT-IN STORAGE: 16GB

BUILD AND DESIGN

The build and design of the OnePlus U1S feels quite good. We kept the TV on its tabletop feet. The feet hold the TV in place quite well with very little wobble. The feet are metal and feel premium. The TV has very slim bezels and at the bottom, we have an array of LED lights that light up when you call the Assistant. When it comes to connectivity, the TV has 3 HDMI ports and 2 USB ports. It supports dual-band Wi-Fi and also supports Bluetooth 5.0. It has an RF port, a min AV port and an optical port.

DISPLAY PERFORMANCE

Kicking things off with the display, the OnePlus U1S has an IPS panel. It has a 4K resolution with support for HDR 10 and HDR 10+ but it does not support Dolby Vision. We played our standard slew of 4K and HDR content on the TV. We played shows like Our Planet, Jack Ryan and more and the performance of the panel is
