Realme Narzo 30 5G

Essentially the fourth storage variant of the Realme 8 5G

The Narzo 30 5G is a budget device from Realme that is eerily similar to the Realme 8 5G that released a couple of months ago. The question that needs to be answered is if both devices have their own place in the Indian market or if the newly-launched Realme Narzo 30 5G is just competing with its own brethren.

BUILD AND DISPLAY

The Realme Narzo 30 5G is a sleek, good-looking 5G smartphone. The rear panel features a glossy texture that, unfortunately, ends up being a finger-print and dust magnet.

The phone has the power button on the right side of the device. This button also doubles as a fingerprint sensor. The sensor's response is impressive and the button itself is very tactile. One disappointing aspect is the lack of dual stereo speakers.

Moving on to the display, the Realme Narzo 30 5G comes packing a 6.5-inch display with Full HD+ resolution and 90Hz refresh rate support. The fast refresh rate ensures that scrolling and flicking between apps appear buttery smooth. The panel's output is vivid and crisp, however, it is not the most colour accurate. Also, the readability of the display goes down in harsh sunlight.

PERFORMANCE

The Realme Narzo 30 5G houses the MediaTek Dimensity 700 SoC, the same chipset used in the Realme 8 5G. This is paired alongside 6GB RAM and 128GB storage.

In our benchmarking tests, the Realme Narzo 30 5G delivered outstanding results for the price. The phone outshone both the Redmi Note 10 and Redmi Note 10s in most benchmarks. In AnTuTu, the Narzo 30 5G beat the Note 10S by a decent margin while decimating the Redmi Note 10. In

GeekBench 5, the Realme Narzo 30 5G scored a 569 in the single-core test and 1777 in the multi-core test. Moving to GPU performance, the Realme Narzo 30 5G delivered convincing results. The phone beat both the Redmi Note 10 and 10S in 3D Mark Wild Life. We also played Call Of Duty: Mobile for our gaming test where the Narzo 30 5G recorded an average FPS of 60 running at 91 per cent stability.

When it comes to using the phone for day-to-day tasks, the phone rarely falters. Performing basic tasks happens without any hitches and multitasking is a smooth affair. The software isn't our favourite though since it is loaded with bloatware. While Realme UI looks pretty clean, it comes with a plethora of third-party preinstalled apps.

CAMERA

The Realme Narzo 30 5G houses the exact same camera setup as the Realme 8 5G. The camera setup is headlined by the Samsung GM1 48MP sensor alongside a 2MP portrait lens and a 2MP macro shooter. You also get a 16MP selfie camera on the front.

The primary camera produces good colour and detail overall, making it a pretty capable shooter in day-light. However, in photos with tricky lighting, the camera struggles at times. In low light photography, the camera's performance is decent. There is some noise in the shots and the camera does struggle to lock focus on subjects at times, but it generally produces pretty serviceable shots, especially with Night Mode turned on. The macro lens on the phone is pretty decent but it doesn't take good shots consistently. The 16-megapixel selfie camera shoots good selfies with ample detail, however, be sure to turn off the beauty filters before using the selfie camera.

BATTERY

The Realme Narzo 30 5G houses a massive 5,000mAh battery that performs decently well for the price. In our tests, streaming Netflix for half an hour drained the battery by merely 5 per cent and 15 minutes of COD:

Mobile brought it down by only 4 per cent. The phone supports 18W fast charging, which is slightly underwhelming.

VERDICT

There's no denying the sheer power of the Realme Narzo 30 5G when it comes to performance. However, the phone is clearly a clone of the Realme 8 5G with some extra RAM thrown in. It is downright confusing why Realme chose to release this phone in India when it could just be a fourth storage variant of the Realme 8 5G.
