boAt Rockerz 330

Good choice for bass lovers

While truly wireless IEMs are all the craze right now, wireless neckband style IEMs are still popular with brands continually providing new offerings for those who prefer this form factor. Homegrown audio company boAt recently expanded its popular 'Rockerz' lineup of wireless earphones and launched the boAt Rockerz 330 in India, priced competitively at Rs 1,299. Let's see how these entry-level wireless earphones fared during our testing process.

BUILD AND COMFORT

The boAt Rockerz 330 is definitely a looker, especially when it comes to what we usually expect in this price segment. It has a simple yet elegant design with a well-built rubber neckband and metallic modules on each side. The one on the right side houses the multi-function button, volume buttons, and the USB-C charging port, while the other one simply has the boAt logo.

The rubber neckband is soft to the touch and feels comfortable around the neck. The earbuds come with metallic housings as well and attach to each other magnetically when lying idle on the chest. You also have silicone wings or fins that enhance the fit, making it snug and comfortable. The company also provides an assortment of ear tips, so users can choose what works best for them. This coupled with the silicone wings makes for an exceptional fit that greatly enhances passive isolation.

FEATURES

While the boAt Rockerz 330 doesn't come with any striking features such as Active Noise Cancellation which isn't expected at this price, it does have a fair number of features that make it a lucrative option. The earphones come equipped with Bluetooth v5.0 for

connectivity and have a wireless range of about 33 feet (unobstructed). They also come with SBC and AAC codec support. It's good to see AAC support at this price point. They also come with Voice Assistant support. The Rockerz 330's onboard controls can not only be

used to adjust volume, play/pause music, and power on/off the buds, but also to summon your source device's voice assistant, answer/reject/end calls, and seek tracks. The controls worked brilliantly throughout our testing period. The buds also come with IPX5 water resistance which means they can shrug off sweat and light splashes, so they can be used in light rainfall or when gymming. Surprisingly, these earphones also come with Dual Pairing, more commonly known as Multi-point connection, where the earphones can be connected to two devices simultaneously. It is great to see this feature on an inexpensive pair of wireless earphones like the boAt Rockerz 330.

PERFORMANCE

Sporting 10mm dynamic drivers, the boAt Rockerz 330 have a heavily bass-focused sound profile. The bass response is extremely punchy and front-and-centre irrespective of the genre of music you are listening to. At times, the bass response also comes across as very dark, where the bass response is extremely overexaggerated and the mids and highs are veiled.

For example, in the track *Pull Me Under* by Dream Theatre, at the 1:20 mark, the bassy drums sound extremely murky and cloud the detail in the other instruments. This makes the track sound flat and one-dimensional. The earphones also produce very underexaggerated highs where the detail in high-pitched instruments and vocals is shrouded and these portions are usually relegated to the background of the track while the lows are definitely on the forefront. In all honesty, these earphones will only appeal to those who are fans of extremely thumpy bass response and primarily listen to genres such as pop, EDM, hip-hop and Bollywood. The boAt Rockerz 330 has an inbuilt microphone that performs decently in most cases.

BATTERY LIFE

The battery life is possibly the strongest suit of the boAt Rockerz 330 wireless earphones. The device promises up to 30 hours of battery life. In our tests, the earphones lasted for about a week with about 3-4 hours of usage per day, so the claim seems to be about right.

When you do need to charge the earphones, they support quick charging where 10 minutes of charge gives you a whopping 10 hours of playtime.

VERDICT

The boAt Rockerz are, no doubt, a good option when it comes to entry-level wireless earphones. Priced aggressively at Rs 1,299, they've got a plethora of appealing features such as 30 hours of battery life, USB-C charging, voice assistant support, multi-point connection, and others. However, the sound quality will definitely be most palatable for bass-lovers or bass-enthusiasts.
