

Neanderthal DNA at risk of C-19

Interbreeding left genetic fossils of Neanderthal DNA which may be more susceptible to C-19. <https://digit.in/jul21-107>

How C-19 affects your DNA

A study of more than 45,000 people offers hints to why some people get sick after infection. <https://digit.in/jul21-108>

ASUS ZenBook Pro Duo 15 OLED

Not your average 15-inch laptop

The ASUS ZenBook Pro Duo 15 OLED looks very similar to its predecessor. But, there are a lot of improvements this time around and most of them are something that we've wanted this machine to have. While the primary OLED is the highlight here, the secondary IPS panel is also a great addition. Let's see how it fared in our review.

DESIGN & BUILD QUALITY

ASUS hasn't changed the design much from its predecessor. The design, with all its angles, colours, and even the materials is pretty much identical to last year's ZenBook Pro Duo 15. The main difference this year is the addition of this new hinge mechanism for the secondary display. The secondary display now lifts up more as you lift the laptop's lid. The overall stability of the chassis is very good.

We wouldn't say this is a compact laptop by any means, but it's slightly thinner than the predecessor. The laptop weighs almost 2.5Kgs, which means it's comparable to some beefier gaming laptops and workstations.

DISPLAY

The main screen is an OLED panel that measures 15.6-inches and has 4K resolution. The secondary display, which is also called ScreenPad Plus, is an IPS panel. ASUS has gone with the same ultrawide 32:10 implementation. It measures 14-inches and is half-4k, which means it's just as crispy and beautiful-looking as the main display.

The OLED panel is bright and vivid with excellent colour coverage and viewing angles. As per our testing, the display covers 100% of the sRGB and 99.5% of DCI-P3 colour space. That being said, the ColorChecker analysis tells us that there's a lot of discolouration happening here. It gave us a DeltaE value of 7.5, which is a lot, and

even a manual colour calibration couldn't entirely fix this issue. On the plus side, the display gets adequately bright and it has great contrast ratios and inky blacks.

PERFORMANCE

Our review unit is kitted with a 10th gen Intel Core i9-10980HK. This processor has a base clock of 2.40Ghz and a max turbo frequency of 5.3Ghz. For graphics, you get an Nvidia GeForce RTX 3070 GPU with 8GB of GDDR6 VRAM with a base TGP of 90W, but it can jump up to 110W depending on the title and in performance mode.

In CineBench R23 test, we noticed that the Core i9-10980HK CPU did hit the 5Ghz mark but there was a lot of fluctuation happening in the clock speeds. The laptop managed to get a single-core score of 1276 and a multi-core score of 10180 in Cinebench R23. It is on par with the 2020 Zephyrus Duo, but the multi-threaded performance is lacking when compared with the ASUS ROG Strix Scar 15 running the Ryzen 9 5900HX. On PCMark 10, the ZenBook Pro Duo managed to score 5931, which is less than the ASUS Zephyrus G15's score of 6927 running

the Ryzen 9 5900HS. In fact, it's less than the score of the MSI Pulse GL66 that we tested running the 11th Gen Intel Core i7-11800H CPU. So, the older CPU is definitely showing its age.

To test the creative workloads, we fired up the Adobe Lightroom to export from RAW files and the laptop managed to export 50 RAW files in 2 minutes, 100 RAW files in 3 minutes and 45 seconds, and 200 RAW files in 7 minutes and 16 seconds.

BATTERY LIFE

The ZenBook Pro Duo OLED packs a 92Whr battery inside. In PCMark 10's Battery Life test, the laptop only managed to last for around 3 hours. In day-to-day usage, you'll only be able to get around 4-5 hours of usage at max, that too when the brightness isn't set to its max value.

VERDICT

The ASUS ZenBook Pro Duo 15 OLED is not your average 15-inch notebook. It's a power-packed machine that will prove to be a great tool for creative professionals and even gamers looking to get their hands on a unique laptop. As much as this machine has improved upon its predecessor, there are a lot of caveats that make it somewhat of a weird recommendation.

—Karthik Iyer

SPECIFICATIONS

PROCESSOR: Intel® Core™ i9-10980HK Processor 2.4 GHz (16M Cache, up to 5.3 GHz, 8 cores) | GRAPHICS: NVIDIA® GeForce® RTX 3070, With Boost up to 1440MHz at 90W (110W with Dynamic Boost), 8GB GDDR6 | RAM: 32GB DDR4 onboard | STORAGE: 1TB M.2 NVMe™ PCIe® 3.0 Performance SSD | DISPLAY: Touch screen, (39.62cm) 15.6-inch, OLED, 4K UHD (3840 x 2160) 16:9, Glossy display, 440nits, DCI-P3: 100%, Pantone Validated | SECONDARY DISPLAY: ScreenPad Plus (14" 3840 x 1100 (4K) IPS-level Panel Support Stylus)
