

UI / UX

Let's look at the UI / UX differences
between Windows 10 and Windows 11

Kshipra Jadav | feedback@digit.in

Windows 10 and Windows 11 differ in a lot of ways. Still, as compared to the difference in UI

between Windows XP and Windows Vista, this is not as big of a jump. There are major differences in some areas whereas some areas have stayed absolutely the same.

Windows XP had a flat but colourful UI. Windows Vista modernized it. XP had an office look to it and if it was used at a home, it just seemed out of place. Vista, although hated by most, did look like it fitted in both an office or home. Windows 7 continued that look, but fixed all of Vista's bugs and was an OS we all loved. Perhaps 7 was the best Windows ever, and one we were all reluctant to move away from. Windows 8 tried to force a tablet like feel on desktop users, which was a flop, 8.1 fixed it and Windows 10 improved it. And that's the shortest history of Windows in the 21st cen-

tury that you're going to read. This is because we prefer to focus on the future rather than dwell on the past. Windows 11 has some marked differences, and it's time to see if those are improvements or not.

SETTING UP THE OS

We're placing screenshots all across this article, and the first one you see is also the first thing you will see when installing Windows 10 and the second one is what you will see when installing Windows 11. The Windows 11 setup process seems much better than Windows 10 because :

1. The whole process looks much cleaner and user friendly now.
2. It fits in with the whole "frosted glass" aesthetic that Windows 11 wants to achieve instead of being a solid colour like Windows 10.
3. The new animations while moving through the menus make the setup process a bit more lively
4. The most important of all, Microsoft has made it really easy for you to set up Windows 11 WITHOUT a

Microsoft account. You can create a local account just by pressing a button. In Windows 10, after version 1903 – you'd have to manually disconnect your PC from the network to force Windows into creating a local account.

Another thing that we like about the setup process is the subtle background glow in the "This might take several minutes" screen. It is much better than the solid blue screen in Windows 10.

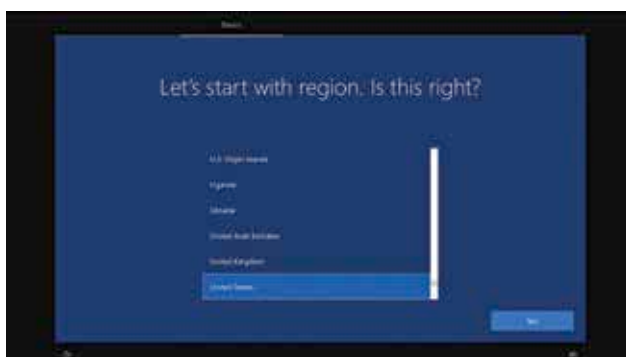

DESKTOP

This is the most looked at screen on your PC. You see it every day, several times a day.

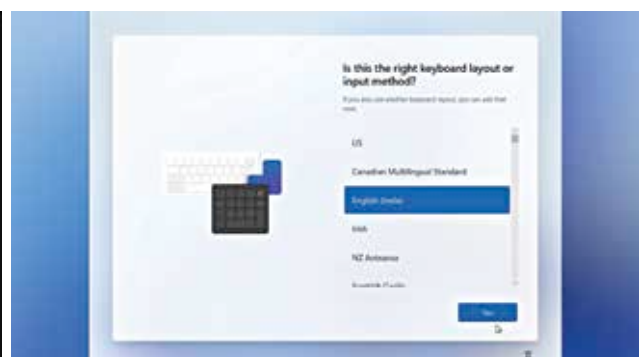

We all know the default Windows 10 wallpaper and look and feel, the Windows 11 default wallpaper has a little more energy and aesthetics to it. The taskbar has the frosted glass element to it with all the icons centered.

START MENU

While the Start Menu has changed with every Windows version, this is
