d Thank you all for writing in so many wonderful letters. We do not have the space to fit them all, and we're not replying to any here, just so that we have space to fit in more letters. We will respond to each one of you personally via email.

—Robert

 I have always been a fan of your work. However, the content is sometimes repetitive especially in the Level Up section. Please tweak it to include more basics like Linux and networking. Since everyone ought to know basic programming, you could have a section which explains the simplest of coding and perhaps draw parallels between different programming languages, instead of the complex content that is usually posted in devworx.

—Navaneth Menon

 Thanks for a wonderful June 21 issue! My feedback is:

Please have more content for millennials. We need more inspirational stories by entrepreneurs, even those who fail. It will bring more focus to your younger readers, inspire them, and show them that there's more to life than 9 to 5 jobs. Readers like me who have kids who are Tweens or

teens (I have a 10 year old son) would like some more content targeted at them. My son has recently started browsing through the pages of Digit, and he loves the funnier stuff, such as BACKBYTE. This is a gateway for them to find the real world of information which is actually your magazine.

—Shweta Vinay

 Dear Digit,
 I have been your reader/subscriber since 2010. I was about 14 years old then, and Digit was a very popular magazine in our school. We students would run to the school library to get our hands on the latest issue. Later some of us would subscribe. I remember, once in your Q&A section of Agent001, my question was answered and I got so excited that I showed everyone in my school, my tuition teachers and neighbours. The arrival of Digit at home is an occasion, and I got so addicted that I needed to unsubscribe during the crucial years of study. I have since resubscribed.

I love that Digit takes criticism seriously and changes itself. My first few copies of Digit came late, but your helpdesk spoke to me and changed to a courier that serviced my area more regularly, and solved that problem.

I remember you once provided the seeds of trees, which we all planted. Although those seeds didn't grow, a seed of responsibility was sown in me and I have started a welfare society which promotes planting of trees and creating awareness to look after the already planted trees.

The content in the magazine & DVDs has kept me updated so much that even today my relatives and friends take advice when they buy some new piece of tech. You guys are so good at predicting tech that what comes in the market after a few months is already known by your readers beforehand.

The content/sections in the magazine has improved / updated with time. Paper quality has always remained satisfactory. Cover pages are always attractive, and you have creative titles and headings.

Digit is the perfect combination of tech, science, space, tips & tricks etc. I feel updated with each and every page I read. Your reviews and recommendations are trustworthy.

I have a few suggestions too:

Some reviews are too long and can be made concise. Can't all of the ads be put in one place? Could you use a different paper for the cover story (this was done earlier for tips and tricks)?

Digit has become an indispensable part of my life, and I cannot do without my monthly dose. I pray that the lockdown have not hit your business hard and the team has remained safe.

—Abhey Goyal

 Hey guys,
 It's great to see that you value customer feedback so much. I am a recent digit subscriber, working in the tech industry.

—Arushi Thakur
