Fired by a bot at Amazon

Stephen Normandin who had spent four years of his life delivering packages for Amazon.com, one day received an automated email. The email said that the algorithms tracking him had decided he wasn't doing his job well. He'd effectively been fired by a bot.

WHAT'S NEW

Apple, Intel first to adopt TSMC's latest chip tech

Apple Inc. and Intel Corp have emerged as the first adopters of Taiwan Semiconductor Manufacturing Co's (TSMC) next-generation chip production technology before its deployment next year, according to Nikkei Asia. Apple and Intel have begun testing their own chip designs with TSMC's 3nm production technology. According to Nikkei Asia, the commercial output of these chips is expected to start in the second half of next year. This indicates that TSMC will continue to be vital to US companies' chip ambitions, even though Washington is attempting to bring more semiconductor

production to America. According to TSMC, 3nm technology can increase computing performance by 10-15 per

cent compared to 5nm and will reduce power consumption by 25-30 per cent. Apple's iPad could likely be the first device to be powered by the 3nm processor, as per sources. Intel is working with TSMC on at least two 3nm projects to design processors for notebooks and data centre servers.

Windows 11 stable version download could begin from October 2021

Microsoft Windows 11 stable version download may officially roll out starting October 2021. Microsoft unveiled Windows 11 OS on June 24 during an online event. Windows 11 preview build rollout began soon thereafter for developers and beta testers featuring all the new changes. A report by Windows Latest,

an official Microsoft poster, and a Walmart listing confirm the Windows 11 stable version release date to be in October 2021. Windows

Latest revealed in its report that Intel calls Windows 11 the "October 2021 update - version 21H2". Windows users are familiar with the "YYMM" format where the "YY" refers to the year and MM represents the month. Therefore, the codename "21H2" points to a release date in the second half of 2021.

Chip shortage could impact iPhone production in Q4

Apple posted record third-quarter results but it also forecasts a slow down moving forward on account of the worsening impact of chip shortage that is already affecting Macs and iPads and will extend to iPhone production in the fourth quarter.
