

command line enthusiasts out there, and professionals who would like to further refine their searches, there is another set of options to explore in TweetDeck.

TweetDeck, after a search is complete, lets its users customise their results further by adding certain operators to their keywords. For example, if you want to search for Tweets containing news and the hashtag India, you can add the operator, filter:news to your keyword, which will make it look like, #India filter:news. What this search would yield is all the Tweets that have the hashtag India in them and have news sources linked with it. This can be reversed too, by adding the negative sign, to convert this filter into a negative filter like, -filter:news.

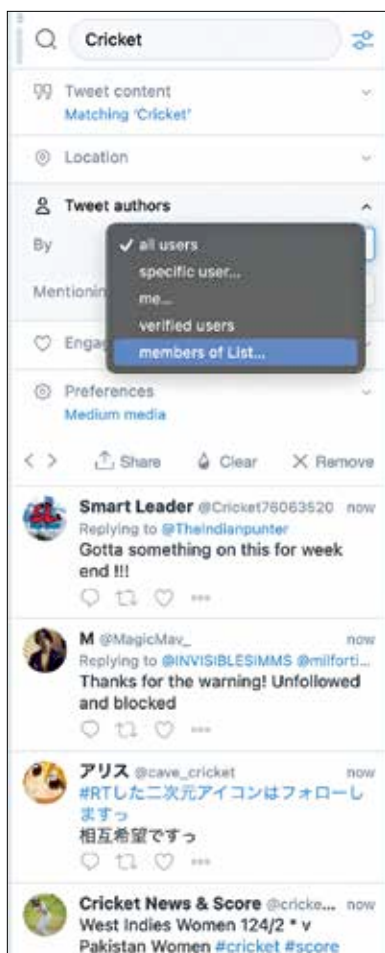

Just like this, there are several other modifiers like (love OR hate), to:user, etc. which have their own unique use case. You can even daisy chain these operators to yield even more specific results. For example, for searching Tweets with mentions of blue or yellow, love or hate, without #soda, and no links to news sources and at least 15 likes, you can write the following in the search bar, "(blue OR yellow) AND (love OR hate) min_faves:15 -filter:news -#soda". These complex search queries can be shared with others using the share button that appears on the bottom of the filters menu in the search column.

The complete list of search operators on TweetDeck can be found here: <https://dgit.in/tweetdecksearch>.

MANAGE YOUR LISTS

Lists have become an increasingly popular feature on Twitter that allows users

The search list option menu in TweetDeck

to get access to just the information they demand from the platform in a separate section. But TweetDeck takes this one step forward.

The app can assign separate columns to separate lists and letting the users use a unique list for search, the app has made life easy for info junkies and journalists who need/want to keep eye on different things at once. For assigning a list a separate column in the app, head over to the left pane, where you can click on the "+" icon. After that, select a preexisting list or create a new one. Once you are through that, click on the "Add Column" button, which would create the column with that particular list in it.

In order to search the Tweets from the accounts in a specific list, all you need to

do is, while applying the filters, select the Tweet Authors option. You will find a drop down, with a button there named "members of List...". Select that button and enter the name of the list, and you will be set.

BEAR

Note taking on any device is an easy task. There are several apps that have come to be the people's choice for note taking, creating lists, and just doing plain and simple writing across operating systems. One such app that has been gaining a lot of traction over on MacOS and iOS side of things is the Bear note taking app. A minimalist markdown note-

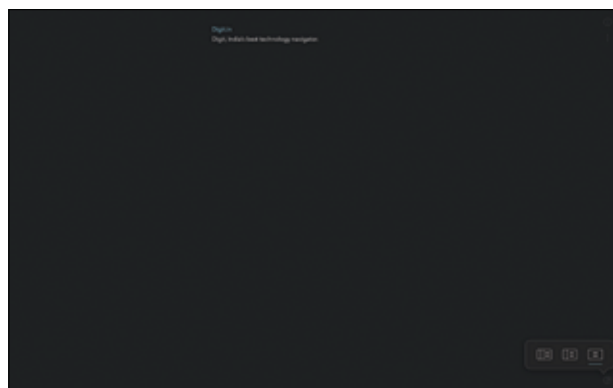

taking/text editing app, Bear has been a fan favorite for years. But there still remain certain features and creature comforts that go unnoticed. Here's a list of some of them.

hurling info at us every single second, it is but natural to get distracted. And to help its users stay away from these distractions, Bear has a focus mode baked in, and we recommend you turn it on. In order to get the focus mode working, all you need to do is head over to the bottom right corner of the app, where you will find, a small icon like this, . Click on this and select the right most option, the one represented by a single pane, in the pop up. And voila! You are in the app's focus mode where you will be away from the slightest of distractions.

PROTECT YOUR NOTES WITH UNIQUE PASSWORDS

The deeper you go into the online world, the more the chances of your information getting leaked online. But, while working with Bear, you can protect and add a line of defense between your soap binge lists, and the stalker who is out there to get you. To add passwords to your notes, you will need to go to the note you want to add the password to, and right click while keeping your cursor on the note. Once the menu

The focus is on the target!

TURN ON FOCUS MODE

At a time when there are hundreds of services on all our devices, even Bear,

opens, mouse over to the 'Privacy' option, and click on it, which will open another submenu with the option to 'Add Password'. Once you
