Realme 32-inch FHD HDR TV

One step forward, two steps back

It was about a year ago that Realme launched a 43-inch FHD TV and while we liked the SDR performance of that TV, the HDR and some basic functions left us wanting more. Today we have with us the 32-inch FHD TV from Realme. Let's see how this one from Realme fares.

BUILD AND DESIGN

Considering the price of the TV we don't expect it to boast of stellar design. The TV has a plastic shell and even though the bezels aren't the slimmest we've seen; they are slim enough not to hinder the viewing experience. The plastic feet hold the TV quite sturdily. All the ports are laid out on one side and we have three HDMI ports, two USB ports, LAN port, antenna, AV and digital audio out. It also supports Wi-Fi (2.4 GHz only) and Bluetooth 5.0.

UI

Just like the Realme TV launched in the past, this one also comes with stock Android TV. Its performance is once again at par with what we experienced last year. The UI is smooth, but there are times when you call upon the assistant and it'll take a bit longer than expected to respond. Unlike the new 4K TVs launched, this one does not come with hands-free controls.

DISPLAY AND PICTURE QUALITY

The TV supports Full HD resolution along with HDR 10. In our measurements, we recorded a peak brightness of about 300 nits with sustained brightness at about 250 nits. The TV supports HDR 10 but does not support Dolby Vision. Let's break down the panel performance of the TV.

The TV can display HDR 10 content from the TV's native apps as well as from an external device. However, it must be noted that the TV only supports HDCP 1.4. When it comes to HDR performance, the overall experience

of the TV left us wanting more. Shows like *Altered Carbon* and *Our Plant* on Netflix lacked the punch one would expect from an entry-level HDR TV. The overall picture was dark and dim.

We used the SpectraCal Calman to measure the colour reproduction TV found that the average delta error was quite high meaning that the colour reproduction was off when compared to the D65 white point standard. In the ColorChecker analysis, we found an average delta error of 11.9 without luminance error and an average delta error of 37 with luminance error. As for the Colour Match analysis, the errors were 14.11 without luminance error and 24.9 with luminance error.

The SDR performance of the TV was a lot better than the HDR performance. We watched *Mission Impossible: Rogue Nation*, *Spider-Man: Homecoming*, *Young Sheldon* and more in SDR and the experience was quite enjoyable.

For the SDR Calman performance, we recorded an average delta error of 9.28 in the ColorChecker analysis for the Movie preset while the standard preset gave us an error of 11.89.

We hooked up a PS5 to play games on the TV and once again the HDR

BUILD	67
FEATURES	74

VALUE	64

performance is poor. Switch to SDR, and we have a much more enjoyable experience.

The TV comes with 4 drivers offering a total sound output of 24W. The audio performance from the speakers is quite good. Be it everyday TV watching like news, or TV shows which have more

conversations than bangs, to the occasional movie, the speaker output is the one impressive thing this TV offers.

VERDICT

It's deja vu, once again. The SDR performance of the TV is good, but the HDR performance of the TV is rather poor. The audio output from the TV is good and the smart capabilities work well. The compromise of resolution for picture performance at 32-inches is an acceptable tradeoff.

—Sameer Mitha

SPECIFICATIONS

PANEL SIZE: 32-inch | PANEL TYPE: VA | PANEL RESOLUTION: 1920x1080p - FHD | PANEL REFRESH RATE: 60Hz | HDR 10 SUPPORT: Yes | DOLBY VISION SUPPORT: No | WEIGHT (WITH STAND): 3.7 kgs | HDMI PORTS: 3 | USB PORTS: 2 | BLUETOOTH: Yes, 5.0 | WI-FI: Yes (2.4GHz Only) | ETHERNET: Yes | SPEAKERS: 4 drivers with a total sound output of 24W | BUILT-IN STORAGE: 8GB
