Sony X90J 55-inch 4K TV

A worthy successor to the X90H

Price
₹1,59,990

In 2020 Sony launched its ready for PS5 TV in the form of the X90H. Its successor, which we have with us today, brings a bunch of new tricks up its sleeves. Unlike the X90H, the Sony X90J runs on Sony's brand new Cognitive XR processor. So, is the X90J worth your hard-earned money? Let's find out.

BUILD	82

PERFORMANCE	80
VALUE	85

saying "OK Google" and this works as well. The response is very snappy and the accuracy of the voice recognition is good.

DISPLAY AND PICTURE QUALITY

The TV has a VA panel which means you get deep blacks at the cost of

viewing angles. The TV does not have Sony's X-Wide Angle technology. The viewing angles are good and unless you go to extreme angles, you should enjoy the content on this TV. It has a 4K resolution with support for HDR 10 and Dolby Vision and while the TV can hit peak brightness upwards of 700 nits, it has a sustained brightness between 550 and 600 nits. While the panel produces punchy colours, the real question is how much of a difference the new XR Processor powering this TV makes.

Sublime is the first thing that will come to mind when you start watching content on this TV. Considering the competition on offer, this TV is a good high-end LED LCD offering in India. In all the HDR content we played on this TV, the content was spot on. The Sony X90J is a Calman ready TV which means, when we hooked up our hardware to this TV, the Calman software can change the settings of the TV to hit

the D65 white point with Delta errors around 1, which is very good. Needless to say, HDR and Dolby Vision content looks sublime on this TV.

For Dolby Vision content the TV has the same Dolby Vision Bright and Dolby Vision Dark and it also has an ambient mode to recognise the light in the room. It's puzzling that Sony didn't go with Dolby Vision IQ on this TV.

Even FHD content looks good on this TV. The TV has a bunch of picture presets, but we suggest leaving the TV on Cinema as it makes the content look the best. The TV has good upscaling too and in 720p and 1080p (especially 1080p content), you cannot make out the jagged edges.

Moving on to gaming, Let's address the elephant in the room. Yes, the TV only has two HDMI 2.1 ports one of which is eARC enabled, so if you have a home theatre or soundbar, you are left with just one port for your PS5 or Xbox Series X console, which is a letdown. Having said that, we don't think the TV was disappointing in any way for those looking for a high-end gaming TV.

The X90J brings Acoustic Multi-Audio Sound Positioning Tweeter and X-Balanced Speaker. The two positional speakers simulate the surround sound and channel shift experience. The speakers sound really good for vocals and have a decent dynamic range but fall flat when it comes to bass.

VERDICT

For the performance on offer, the TV is no slouch. It has one of the best out of the box colour calibration we've seen on a TV this year. The TV offers an immersive viewing experience and the colour pop thanks to the new XR processor.

BUILD AND DESIGN

You have 2 feet holding the TV in place and they don't need screws to attach them. The feet are quite thin and come with external clips one can use for cable management. The back this time isn't flush but has a bit of design and if you see the side edges, you will notice the side-firing tweeters of the TV. All the connectivity options are laid out on one side. The remote control is the same as what we saw last year with the X90H and we think this is a well-built ergonomic remote control.

UI

Google TV UI on this TV feels like a mixed bag. Maybe it's a learning curve, but the Google TV UI feels slightly incomplete right now and Google may need to fine-tune it a little bit.

One addition is that of far-field mics, you can control the TV by simply

SPECIFICATIONS
