

ZeroMouse

Funding: US\$ 20,949 pledged of US\$ 1,000 goal

Link: <https://dgit.in/zeromouse>

If a compact form factor is paramount for you when you're looking for a wireless mouse, the ZeroMouse is the tiniest you can go. As per the company, this is the world's smallest wireless mouse that measures just 13 x 24 x 46 mm. Not only is it a mouse, but it can also be used as a presenter or a laser pointer. Equipped with a USB-C charging port, this Bluetooth 4.1 powered mouse is supported on Windows, macOS, iOS and Android. With its one-finger operating system, the mouse can be used anywhere on the go including cramped spaces such as a desk edge or even on your jeans. You can also seamlessly switch between mouse mode and

air mode, as the situation demands. When used as a pointer, the ZeroMouse allows you to pinpoint any specific data on a presentation with its laser pointer. It can also be used to switch between slides. The design of the ZeroMouse is minimalistic and modern. It has a clean curved-edge oval shape with a matte finish. It comes in black, white and silver colour options as well. The mouse also has a 250mAh battery and a wireless range of up to 10m.

Drinkie

Funding: US\$ 159,210 pledged of US\$ 10,000 goal

Link: <https://dgit.in/drinkie>

Drinkie is a smart self-cleaning water dispenser for pets that comes with five days of water storage and can remotely clean your pet's dish when you're away. The device houses a patent-pending Pulse System that keeps your pet's water clean. Unlike traditional dispensers, Drinkie doesn't need any filters to purify the water. Instead, the dispenser sources clean water for your pet's dish from a fresh water tank. Things such as stray whiskers, food particles and germs are rinsed away into a separate airtight waste water tank after every wash. The device has an accompanying app that lets the pet owner deploy fresh water into the bowl remotely, so even if they are on a vacation or at the office, Drinkie can remotely provide your pets with clean water for up to 5 days. The accompanying app also notifies the pet owner every time the water in the bowl is about to finish. You can check the water levels in your pet's dish, set a rinsing schedule, and also set day and night mode within the app. Users can also monitor their pets' drinking habits to know how much water they've consumed and at what intervals. To use Drinkie, all you need to do is add clean water into the fresh water tank, set the time and frequency of cleaning via the app, and then simply watch as it does all the work to keep your furry mate's thirst quenched.

EcoFlow DELTA Pro

Funding: US\$ 6,304,634 pledged of

US\$ 100,000 goal

Link: <https://dgit.in/ecoflowdeltapro>

EcoFlow is a portable power and renewable energy solutions company that we've previously covered in this section. On July 15, the company unveiled its newest product, the EcoFlow DELTA Pro portable home battery on Kickstarter. The device is primarily designed for two use cases – providing backup power to homes during power outages and lowering utility bills by monitoring and controlling power consumption in one's day to day life. Allegedly, the DELTA Pro is capable of powering 99.99 percent of appliances and comes with a

plethora of features. The DELTA Pro has a base capacity of 3.6kWh that the company states should be enough to meet a home's emergency power requirements for approximately a day. However, the

device can be connected to an ecosystem of accessories such as Smart Extra batteries, Smart Home Panel, and Smart Generators that increase the device's capacity to up to 25kWh which should be enough to meet a family's emergency energy needs for almost a week. This is the largest expandable capacity of any of the portable power stations on the market, as per EcoFlow. With the accessories, the DELTA Pro is capable of harnessing multiple power sources such as the grid, solar, wind, and gasoline. Moreover, with the EV X-Stream Adapter, the device also supports EV charging. The EcoFlow DELTA Pro supports 3000W charging via EV charging, the EcoFlow Smart Home Panel or a 240V outlet. For even faster charging, the device can be connected to the Smart Extra Battery accessory to boost the input to 6000W.
