

RIGHT TO REPAIR

IS IT BETTER FOR THE ENVIRONMENT
AND YOUR POCKET?

Team Digit | feedback@digit.in

We celebrate our seventy fourth Independence Day in August 2021, and every August Digit looks at a way to include some aspect of “freedom” in our pack. This can be open source or free software, fights against censorship, against snooping on you, your right to privacy, and more. This August, we wanted to give you an insight into the recently resurfaced “Right to Repair” movement, as it is, in a way, related to how much freedom we have, or should have, when it comes to technology and the gadgets we buy. This is a touchy subject, and even within Team Digit there are those who disagree with the very idea of Right to Repair, which is exactly why it’s perfect! Conflicting views are good, and we hope to be able to present all sides to you, and let you make up your mind about whether you want this or not. In the pages that follow, we’ll cover:

- **Is Old really Gold?**Pg. 55
- **Counter-view: A threat to privacy?**Pg. 57
- **Right to Repair: The movement**Pg. 59
- **Legislation: What kind of future do we want?**Pg. 61
