Evan's Remains

Evan's Remains is a 2D platformer puzzle game sure to catch your eye.

Even though the game is 2D, the animations more than make up for it and the intriguing story is sure to have you playing for days.

We start with a letter from Evan which states that he is at an island in the Pacific and that he wants Dysis, our protagonist, to come and meet him there. As Dysis reaches the island, she has no way out as her boat has crashed and all she can do is try and find Evan on this uninhabited island.

As Dysis moves ahead while giving constant updates to her remote scientist friend, Nikolai, she faces tons and tons of monolithic puzzles which seem to have technology which is considered futuristic even today. Dysis needs to pass through

the various puzzles all in a different way and by making use of the various different monoliths that seem to have different functions.

The graphics on the game are a very beautiful pixel design and the landscape in the background is something to sit down and listen to lo fi music to.

The music in the game is also very well placed with a soft jingly tune while you're travelling through the beach and intense drumming where needed.

From the character design to the animations, Evan's Remains keeps you seated through your playthrough and keeps you engaged all the while surprising you every time you think you know something.

As the story unfolds, the mystery grows. Is Evan even on the island? What is the weird guy doing on this uninhabited island? Will we find out? We guess we'll just have to keep playing.

Flash Party

From the makers of Muse Dash and Human Fall Flat, comes a 2D platformer game that is both additive and rage inducing. Flash Party is a game developed by XD Games. It follows a simple – and literal – concept of “last man standing wins.” Flash Party is a PvP online game, and the main objective of the game is to knock the opponent off the platform 3 times.

The combat mechanics of this game are what make it so special. On your left thumb, as always, you will get the movement joystick. On your right thumb, you will get the jump button, the special ability button and the attack button. That's it. The whole combat of the game relies on those three buttons. As soon as you are matched with a player and you enter the game, you will have to defend against your opponent's attacks and land some hits on your opponent while you're at it, eventually knocking him out of the platform.

The special ability button and the attack button, both are direction sensitive. Meaning, you don't just have to tap them

to attack, you have to swipe in the direction you want to attack too. The direction plays an important part as it will decide the intensity and the type of attack that your player will perform. For example, if you swipe left or right on the special ability button with Sophia, she will perform 4 consecutive strikes on her opponent using her bat but if you swipe up or down, provided your timing and placing is right, she can directly knock the opponent out of the playing field.

There are several heroes that you can either buy using micro-transactions or unlock by just playing more. Each hero comes with its own unique special ability and stats. The stats too, can be upgraded using in-game currency or micro-transactions.

Overall, this game might seem as a spam heavy game where you just have to spam the attack button mindlessly, but once you actually complete 2-3 battles, you will realise the importance of timing, placement and direction of attack. We highly recommend you give this one a try as it supports online play as well as friendly play too where you can create a room and play with your friends.
