It's been a true pleasure meeting my favourite magazine after 20 long years. Still remember the feeling when I bought it 20 years back on a railway station book stall... I found a 'friend' in form of Digit magazine who feeds me with information and a super duper cool CD/DVD...also holding that poster inside and pasting on the home walls was a feeling to remember, can not describe it... My feedback is just thanks thanks thanks and lots of love to Digit magazine team!

—Vivek Raje

for my first annual subscription of the magazine with my own earnings.

Coming to the feedback side of this letter, I would like to emphasize how much I am in love with the entire array of information. The last 3 phones I have brought over the years have been due to the reviews I read here. In-depth reviews, beautiful commentaries on tech, and everything tech-related.

I would like to advise you guys to maybe add a little more content on tutorials, DIYs, and how-to-do guides.

—Ambrish Mishra

It was a warm summer afternoon when I first came across the Digit magazine in a very secluded, rusty corner in my school's library. It had a few images on the cover and being a child who was fascinated by gadgets, very naturally, I picked it up, rather grabbed it. Dusted it off and read one of your issues for the first time. This was my first interaction with the magazine in its entirety. What followed was a lean, slim, tall boy from class 6th started spending most of his library periods in that rusted corner of the library reading just this one magazine.

As time passed by, I wasn't really able to read it on a regular basis due to everything that was happening around me. Things changed a bit when I paid

Hello Digit, I am a subscriber of the Digit magazine for almost 5 years now and I can proudly say that I've learned a lot from it. From all the techy stuff to the science and cult, the content never got boring or tiring to read...

So here... I'm requesting a new section in the mag, a tiny one, which would include some commonly mistaken or unknown things to help young or inexperienced readers to reach deep into the geek world a little easier.

—Ayush Srivastava

Hey there, Its been an amazing journey for Digit. I remember I first read my first Digit magazine in my school time.

Hello, I'm Lay Khatri. I'm one of long subscriber of Digit. Even through the pandemic time you continued your service. A huge hats off to all of you for maintaining.

The poster which you always share with the bundle, the images are great, no doubt in it. But would like to say, you need to increase paper quality. Early this week I was going through my collection. They were stored in proper big plastic air tight bag. I pulled out and opened. But few of them were torn from the markings of fold. What I propose is:

- 1) Reduce the size to A4 (which is 1/4 of current)
- 2) Increase the paper quality. (Which will look better and can be stored for longer time)

—Lay Khatri
