

**AI video game coach**

SenpAI.GG is an AI powered video game coach which will provide in-game audio cues and more. <https://dgit.in/sep21-47>

**Windows 11 on M1 Macs!**

Parallels Desktop 17 promises better performance and Windows 11 emulation on M1 Macs. <https://dgit.in/sep21-48>

Boost productivity

Make your daily work more productive with Vectornator, Agenda and Rectangle

Satvik Pandey | feedback@dgit.in

This month, we have three workshops instead of just one. Vectornator allows you to creatively express yourself, Agenda makes note taking fun, and Rectangle allows you to better organise your workspaces while working with multiple applications at the same time. If you are a blogger or content creator, all of these apps should be useful for you, while Agenda and Rectangle can be of benefit to anyone.

VECTORNATOR

Vectornator is one of the few apps with an ample amount of free to use features that have enabled many creators to bring their ideas to life.

Record time lapses

Internet today is filled with artists sharing time-lapse videos of them making the best of their artworks. Vectornator took notice, and the developers added an in-built feature, letting the users record and export time-lapse of the artwork creation from start to finish. In Vectornator, since the first stroke of the pen on your artboard, your actions will start getting recorded without having you hit the record button, which is something users may forget to do. This is a feature that is turned on by default. To get this time-lapse video, go to the File option on the applica-

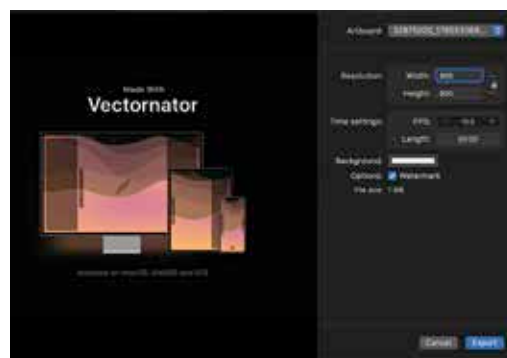

tion's top menu bar. From there, select the Time-Lapse option. The keyboard shortcut for this function is cmd+T. In the window that opens, you will be greeted with a host of options that will let you change different values for your exported video and the option to remove the watermark. Once you have configured the video properties, a popup will appear, where you will have to enter the file name and set the location for the exported file to be saved. Click Save, and you will have your time-lapse ready for sharing on the internet.

The Iconator

Many other services similar Vectornator charge their users for proprietary icons as well as the different shapes that the creators add to their artworks. Vectornator provides users with a whole library of icons called Iconator, from where you can pick and choose icons that you can use freely without any licensing whatsoever inside the application.

To use Iconator inside of the app, you will need to go to the top right corner of the window and find the Library option. When you click that, you will have a small pop up open in front of you with multiple options along the bottom half. From there, you will need to select the one labelled as Iconator. This will lead

The time lapse configuration menu

you to the library, from where you can search and choose the icon of your choice.

If you are not a Vectornator user or want to put the icons from an external file, you can also use Iconator from your browser. Go to
