

Samsung galaxy Z fold 3

Samsung Galaxy Z Fold 3 and Galaxy Z Flip 3, potential of folding screens in different ways is here. <https://dgit.in/sep21-49>

Samsung x Google Smartwatch

The Galaxy Watch 4 get's the best of both worlds - Samsung's Hardware + Google's software. <https://dgit.in/sep21-50>

the URL: <https://www.vectornator.io/> icons and search for the icon that you would want to use in your artwork. Once you have selected the icon, click on the icon that you want to download. You will be presented with two options, to save the icon as an SVG or PNG file. Select the option that suits you the most and download the icon to use in your artwork.

Template Hub

Vectornator has made it easy to switch the creations out into the various sizes and aspect ratios needed for different social media platforms, saving the users the trouble of having to lookup these on their own. Optionally, users also have the choice of keying in custom dimensions, and Vectornator will automatically rearrange the content to fit the provided values. Additionally, there is a large library of preset values for various use cases.

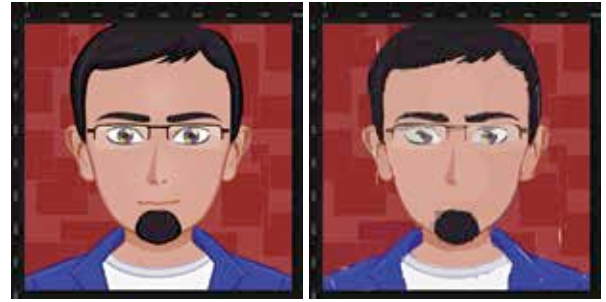

Called the Templates Hub, it is Vectornator's very own library of all the size guides that you would need ever, all in one place, neatly placed into categories. Want to design a label for a wine bottle? They've got you covered. Or do you want to make sure that your next post on LinkedIn looks perfect? Template Hub is there for you. Here's the URL that will take you to the Template Hub: <https://www.vectornator.io/templates>

Let the machine do the tracing

Vectors have been one of the most used computer graphic formats since their inception. But, creating vectors while trying to match or all in copy the design of an already existing art piece

can be a challenge for even the most skilled artists. Vectornator, though, has an inbuilt tool called Auto Trace that lets users take any picture, drop it into Vectornator and convert it into vector art.

To do this, you will first need to import the image that you want to convert into a vector. Go to the Document picker or import file option on the very first screen of your application when you open it. Once you have the desired image, you will need to unlock the layer containing the image by clicking the small padlock shaped icon that is there on the layers tab, right next to the layer you are working with. Just make sure that the image containing layer is selected by clicking on the image, after which the Auto Trace options will appear on the right options pane. From there, you can select the number of trace paths and the minimum path size. Finally, click on the Auto Trace option, and

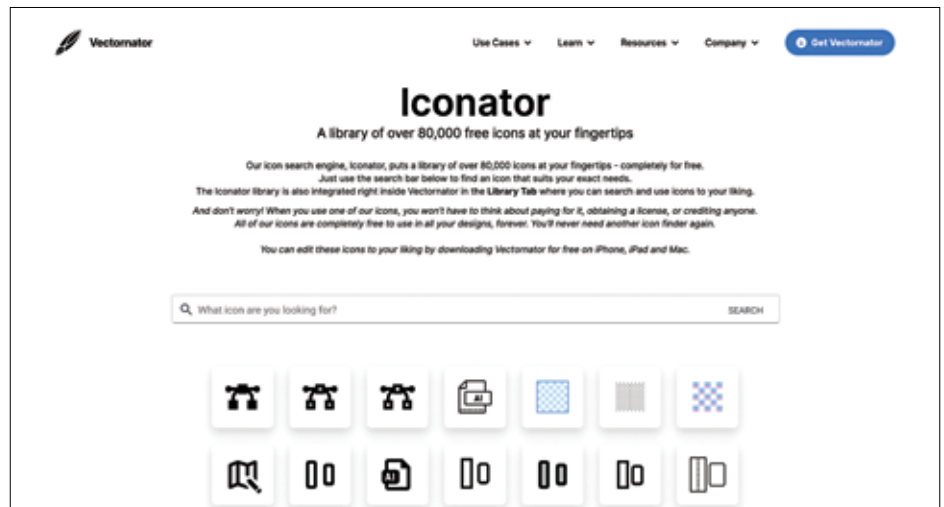

Original image (left) and its traced version on Vectornator (right)

you will have your traced vector image ready to be edited and changed.

AGENDA

This app sheds the distractions and makes note taking fun. Organizing the notes that have been taken down is often a nightmare of a task to handle. Dating every note in a project, making sure that nothing slips by is something that can take up a lot of time that could otherwise have been put into a better task. Here's where Agenda: Date focused note-taking app comes into the picture.

As you would have guessed by the name and the premise by now, Agenda is an app that is made with the sole aim of making sure that all the notes that you take are dated in the best, most organized way possible on your Apple device, be it a phone, tablet or laptop. You can not only take notes but also plan and document projects. We have brought you some
