MICROSOFT IS FREQUENTLY ROLLING OUT NEW TOOLS FOR ITS USERS, and things look great so far for the Windows 10 camp. Back in December 2020, the company announced a suite of tools called Microsoft PowerToys. What Powertoys does is give users more control of the system without having to install shady software or following obtuse YouTube tutorials to tweak the

system. Users no longer need to go into the registry files, add new ones and fiddle around with the old ones to make a feature or two work the way you liked it. Microsoft served it on a silver platter to the users.

PowerToys became a must-have for everyone who was remotely geeky, a power user, tinkerer or just someone who wants to get things done. PowerToys has brought in great features, which were previously not available even through registry editing. And as

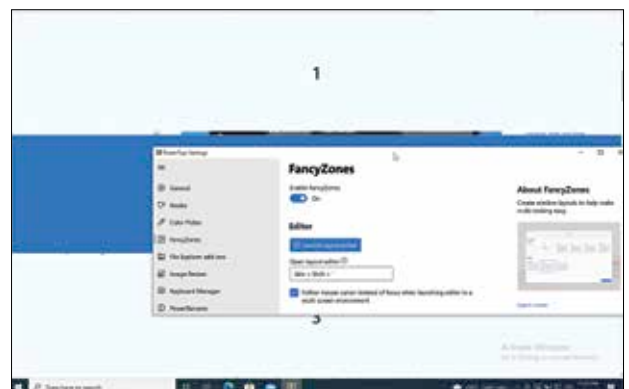

it continues to be a fan favourite and people are doing all sorts of things with them. They can make the experience of the users a lot better, and for the starters, they can give a great setup

to begin with. We have combined all those in this list of tips and tricks that we are sure will serve you with some features that most users don't know exist and are not exploiting to the fullest. These are some of the favorite new functionalities available through PowerToys, so let us get to it.
