up. However, many studios require a Bachelors degree at a minimum, and this can be in anything from arts, animation and visual effects. There are short two year post graduate diploma courses created with industry partnerships with placement to studios at the end. These courses are the best way to get into the industry without having to start from the bottom and prove your prowess through internships.

The main thing that you must look at in the curriculum while searching for a course to pursue. You have to learn things like, texture, colour, dimension, scale, perspective, shade, composition, depth of field, proportion, lighting, and spatial awareness. If you can get the knowledge of these things during your program, you are good to go. Like any work in the media industry, texturing artists may have to work long hours in gruelling conditions to meet tight deadlines, so be prepared to spend hours and days in front of a texturing console.

During the process of working and learning, make sure to develop a strong portfolio of your work. That is what you will be presenting to the recruiters when you are interviewing for a role at your dream game development or VFX studio. Say, if you have some interest in the field of texturing and want to give it a try, despite being in a degree of a separate discipline altogether, you can pick

up an online course from one of the many MOOC providers out there. Alternatively, you can go in for a master's degree or even a professional online course from a university to get to know the field even better and develop command over the tools you would be using. Remember that the tools of the trade keep changing, so focus on concepts and not software. As told by ILM Texture Supervisor Gareth Jansen, who was the texture supervisor for Avengers: Endgame, in an interview with Adobe, "Never stop learning and experimenting".

The industry is very accommodative and values experience more than degrees, a current listing by Cosmos-Maya, a well known animation company, for the position of Texture Artist has just one requirement: Minimum 1 year - 4 year work experience. We are not discouraging you from getting a degree, in fact, it is better for those starting out, but the lack of one does not hold you back within this industry where many have learned on the job.

THE FUTURE

The media industry was one of the hardest hit by the pandemic, and a lot of artists had to work from lower powered computers at home. However, there is a saying in the industry that the show must go on. This is proven by the fact that in the years 2020 and 2021, so far, with

the pandemic raging, Ricky and Morty, one of the most celebrated and decorated animated series of recent years, has had a season and a half of it aired. Other animated series remain in production even though filming has stopped.

When it comes to India, it is pretty evident that things are growing fast in the country, and with some of the most prominent players coming down to set up facilities, that there will be jobs available. Netflix, one of the most popular streaming platforms on the globe, recently revealed its plan to set up its first live-action postproduction facility right here in Mumbai. India is actually becoming a hub for global CGI production. In 2015, the country's VFX prowess came to the forefront when a team of VFX artists from Goregaon, Mumbai, designed the fabled dragons of Game of Thrones. Many of the VFX for the MCU were done in the country as well. In terms of the numbers in your bank account, Glassdoor sug-

We make GOT dragons in India

gests that the average base pay for a texturing artist in India is Rs 31,208 per month. This with the fact that companies are looking towards India and even the indigenous productions are making international hits like Bahubali, the prospects for texturing artists are bright. If you want to dive into the industry, there could not have been a better time to do so.

The PSS Central Institute of Vocational Education has a textbook available that can help you get an idea of the basis for doing the job of a texturing artist. It can be found here: <https://dgit.in/texttextbook>
