

Noise ColorFit Pro 3

Noise ColorFit Pro 3 smart-watch and Noise Buds VS103 (TWS) earbuds have launched in India. <https://dgit.in/sep21-41>

Xiaomi on top

As of July 2021, Xiaomi is the world's largest smartphone seller with 17.1% global market share. <https://dgit.in/sep21-42>

Easily removable motherboard

After all the prying and prodding that was required to inspect the previous elements, the motherboard provides a breath of relief since it only requires a Philips screwdriver to be removed. However, once you have that out of the way, it's back to adhesive nightmare with the 1.43-inch AMOLED display that is firmly stuck to the body.

Huawei Watch 3

Repairability is not an easy affair with this watch

The new Huawei Watch 3 hasn't evolved a lot repair-wise. In fact, more components are crammed in and fewer can be repaired independently. The battery is easy to access and replace, but that's about it. Opening the watch is pretty difficult and many components are glued in place.

Additionally, a broken display requires replacing the main watch case altogether.

Of chips and processors

With the motherboard out, you can see some hidden chips at the bottom including the CMJRD11G04G 16 GB NAND flash storage layered above maybe a WiFi processor, the Ambiq Micro AMAP42 Apollo4 SoC, and the Runic RS7222 USB 2.0 DPDT analog switch. The top of the MoBo features the GF2EE1-16G-X 2 GB SDRAM with a HiSilicon Hi6262 Kirin 710 layered underneath, the Kirin A1 with a Bluetooth controller, and a few more chips.
