

Xiaomi's Cyberdog

Xiaomi's design team clearly just leaned in and went full-on Robocop; meet the cyberdog! <https://dgit.in/sep21-63>

AirPods to get Find My features

The iOS 15 beta code suggests that AirPods Pro and AirPods Max may get the 'Find My' function. <https://dgit.in/sep21-64>

RedmiBook 15 Pro

Fast but flawed

Price
₹49,999

R

edmi marked its entry into the laptop segment in India

with the launch of new laptops – the RedmiBook 15 Pro and the RedmiBook 15 e-Learning edition. The RedmiBook 15 Pro laptop brings an Intel Core i5-11300H CPU with 8GB RAM and Intel's Iris Xe graphics. On paper, the laptop looks like it can go head-to-head with more expensive laptops on the market. Let's see how it fares.

BUILD	70

VALUE	70

got pretty bad viewing angles and some gaudy colours. First of all, we were able to record a peak

brightness of 212 nits and a contrast ratio of 264:1. The Calman Studio software tells us that the RGB balance is way off. The display shows a heavy blue bias. And because of that heavy blue, the colour actually

spills over to basically every other colour in the gamut making the overall panel look pretty bad.

PERFORMANCE

Xiaomi has decided to go with an H-series processor for the RedmiBook Pro which is kind of interesting. We want to point out that even though this is an H-series processor, it's essentially a U-series chip moving up to 35W. This means the RedmiBook 15 Pro is also more powerful than the Mi Notebook Horizon Edition that was fitted with an Intel Core i7-10710U.

In PCMark 10's Modern office test, the RedmiBook Pro managed to score 4,851. Moving on to Cinebench R23, the RedmiBook Pro scored 4647 in the multi-core test and 1424 in the single-core test. These scores are higher than the Mi Notebook 14 Horizon Edition. These numbers reflect very well in real-world usage as well. The RedmiBook 15 Pro would handle a ton of Google Chrome tabs and even have some appli-

cations running in the background. Moving on to the graphics performance of the laptop, the Iris Xe graphics that are paired with the Intel Core i5-11300H has a max dynamic frequency of 1.3Ghz. It has 80 execution units which is a good number.

In 3DMark's FireStrike test, the RedmiBook Pro managed to score 1824 which is lower in comparison to Mi Notebook 14 Horizon Edition. The RedmiBook Pro Iris Xe graphics did manage to score higher than what ThinkPad 14's AMD Radeon 625 graphics scored. We also tried playing games. In Valorant, we were able to hit the 60FPS mark rather comfortably. Games like Apex Legends, FIFA 21, DOTA 2, etc. will also work just fine. The RedmiBook 15 Pro isn't exactly a creative-friendly laptop since it doesn't have the necessary tools.

BATTERY LIFE

The RedmiBook 15 Pro packs a 46Whr battery inside which charges via a 65W charger that comes inside the box. In PCMark 10's battery life test, the RedmiBook 15 Pro managed to last for 5 hours and 9 minutes at max brightness.

With our day-to-day workloads, the RedmiBook 15 Pro managed to last for about 6 hours.

VERDICT

The RedmiBook 15 Pro laptop is priced at ₹49,999 in India. There are two main flaws we found – the screen quality and the lack of backlighting on the keyboard. Considering the fact that you have a limited number of reliable laptops under 50K, the RedmiBook 15 Pro isn't a terrible option. So if you are okay with its flaws, you'll find that the RedmiBook 15 Pro offers quite a bit for its budget price.

BUILD AND DESIGN

The RedmiBook 15 Pro looks plain with a fairly muted design. The laptop has a polycarbonate chassis and it weighs 1.8kgs. The display also has a noticeable amount of bezels around it. It has a 720p webcam and the quality is, well, just about what you'd expect from a budget laptop with a 720p camera. The 2W stereo speakers are located at the bottom panel here. They get decently loud and deliver balanced audio that's better than some other laptops in this price range.

DISPLAY

If there's one thing about this laptop that we are utterly disappointed by, it has to be the display. The RedmiBook 15 Pro comes with a 15.6-inch 1080p panel. It's a TN panel which means it's

SPECIFICATIONS

PROCESSOR: 11th Gen Intel Core i5-11300H, 4.4GHz max clock | GRAPHICS: Intel Iris Xe Graphics - 80EU | RAM: 8GB DDR4 onboard | STORAGE: 512GB PCIe NVMe SSD | DISPLAY: (39.62cm) 15.6-inch, FHD (1920x1080) 16:9, TN panel
