Fujitsu UH-X 11th Gen Intel Core i7

Lightweight, versatile and well-built

Japanese engineering is second to none, most of the time. So, when Fujitsu sent over its “made-in-Japan” laptop, we were intrigued, to say the least. The unit is a 2-in-1 convertible laptop featuring a touch-screen and a 360-degree hinge. Let's see how it fares.

BUILD AND DESIGN

The build quality of Fujitsu UH-X 2-in-1 is top-notch. The laptop's chassis is made from Magnesium Alloy and has no flex at all. The deck area has a very grippy finish which improves the overall typing experience. This along with the ultra-lightweight of 997g makes the Fujitsu UH-X 2-in-1 easy to hold and extremely portable.

In terms of design, the Fujitsu UH-X 2-in-1 looks distinct from other laptops in its class. It is loo very stealthy, has an all-black matte finish on its entire body, is as slim as other laptops in this segment but feels way more sturdy.

DISPLAY

The Fujitsu UH-X 2-in-1 convertible laptop comes with a 13.3 inch 60Hz FHD IPS Anti-Glare panel. Fujitsu claims a peak brightness of 400 nits for the display. In our tests, the peak brightness of the laptop came out to somewhere around 350 nits.

The 13.3-inch display has a lot to like about. First of all, it rarely attracts any fingerprints. It has a matte finish which also makes using its touch screen a smooth experience. In other tests, we found that the laptop's screen covers 100% sRGB, 73.8% Adobe RGB and 73.4% DCI-P3 colour spaces.

The Fujitsu UH-X 2-in-1 comes with a 360-degree hinge, meaning you can use the laptop conventionally, upside

down, as a drawing tablet, in portrait mode and in any other way that you want. The laptop's screen has excellent viewing angles.

PERFORMANCE

The Fujitsu UH-X 2-in-1 Convertible is a solid

performer. It comes with a powerful 11th Gen Intel Core i7-1165G7 processor featuring 4-core and 8-threads. The laptop does not feel sluggish even if you've multiple tabs and windows opened simultaneously.

In order to get an in-depth look at the performance of the Intel Core i7-1165G7 chip in this laptop, we ran it through a couple of benchmarks. On Cinebench R20, the Fujitsu UH-X 2-in-1 scored 1773, which is amongst the top-level scores this particular Intel chip can achieve. In a Cinebench R23 single-core test, the Intel Core i7-1165G7 scored one of the highest points.

The multi-core performance of the Intel Core i7-1165G7 seems average as per its Cinebench R23 multi-core score. However, in everyday tasks, the UH-X 2-in-1 convertible laptop fared pretty well. We use Vectr for photo editing and the laptop handled it without any hiccups. The Iris Xe graphics

chip onboard is good enough for light gaming. We tested Shadow of the Tomb Raider at the lowest possible graphical preset and the laptop managed 33FPS on average. We used PC Mark 10 to benchmark the laptop's performance in everyday office tasks like document editing, video conferencing etc. The Fujitsu UH-X 2-in-1 scored 4646, which is decent.

BATTERY LIFE

This laptop's main aim seems to be to deliver optimal performance in day-to-day tasks by keeping an extensive focus on efficiency. We did a battery test on the laptop focused on Microsoft Office. After an overnight test, the test showed that the Fujitsu UH-X 2-in-1 has a battery life of 9 hours 58 mins.

So, the Fujitsu UH-X 2-in-1 convertible can take care of your everyday tasks with ease.

VERDICT

The Fujitsu UH-X 2-in-1 stands tall when compared to the competition in terms of build quality and overall features. The Fujitsu UH-X 2-in-1 does everything really well, besides a few caveats. With great battery life, a rich selection of I/O ports, and sturdy build quality, the Fujitsu UH-X 2-in-1 convertible laptop becomes a good proposition for business users. Sure it is not an editing powerhouse featuring an ultra-powerful CPU, but it is the business laptop that'll last you for years to come and be your money's worth.
