

Nextube

Funding: US\$ 304,530 pledged of US\$ 9,990 goal

Link: <https://dgit.in/nextube>

Rotrics recently launched the Nextube, a hackable nixie clock inspired modern display, on Kickstarter. The Nextube looks like a retro piece of art but is a modern-day display that uses IPS screens to provide the warm orange glow of retro tech. You can use the display to know the time, arrange your schedule, check the weather, track social media such as subscriber count for YouTube, and follower count for Instagram, visualise music, and even light up your room with a faint glow. There are also various fonts available that you can choose from. Nixie tubes were introduced in the 1950s as numerical displays but they got sidelined due to new LED display tech. They were also fragile, had a short lifespan and required a lot of maintenance. Nextube eliminates those problems.

Nextube has a lifespan of approximately 100,000 hours compared to the 5,000 hours lifespan of traditional Nixie Tubes. Apart from the built-in display options and functionalities, you can also DIY personal display effects by using the accompanying software. Additionally, open-source firmware is also available for more customisation. Assembly is also super simple, you just connect it to a power source, tap to switch between applications, and click the touch button to start a timer. The device supports 5V/1A USB-C power input and has Wi-Fi connectivity. It weighs around 250g, so it is portable as well.

Mojo68

Funding: US\$ 521,532 pledged of US\$ 50,000 goal

Link: <https://dgit.in/mojo68>

China-based MelGeek recently rolled out a Kickstarter campaign for its newest offering, the Mojo68 mechanical keyboard. Not only is it customisable and programmable, but it is also see-through. Aside from having a transparent frame, the Mojo68 keyboard comes in six different styles, with keycaps in three profiles and five different types of switches. Each version of the Mojo68 keyboard features a gasket mount, RGB backlight, and hot-swappable and programmable keys. Hot-swappable keys allow users to easily swap, upgrade or mix switches without any soldering. To program the device, the user will need to use MelGeek's KBTools app. Within the app, users can personalise the keyboard, assign characteristics to function keys, tweak the backlighting and shortcut settings, and even add extra functions using up to four function (FN) keys. The keyboard even packs some features to boost the user's typing experience. The device has a unique internal mounting style with an advanced gasket mount. Additionally, silicone surrounds the keyboard plate to act as a shock absorber. Poron, a urethane foam, is used to dampen sound and reduce finger strain when typing. The keyboard is compatible with Mac, Windows, iOS and Android devices. It has Bluetooth, 2.4 USB wireless and even Type-C wired connectivity.

SofabatonX1

Funding: US\$ 166,707 pledged of US\$ 9,999 goal

Link: <https://dgit.in/sofabatonx1>

The SofabatonX1 is a universal all-in-one smart remote that can control most of your entertainment and home devices. The remote is compatible with over 5,00,000 devices eliminating the need to have separate remote controls for everything electronic. The SofabatonX1 is the successor to the Sofabaton U1 which had over 1,00,000 users globally and received a fair share of positive feedback. The remote connects with devices such as TVs, DVD players, cable

boxes, gaming consoles, and much more. You can seamlessly switch between devices via a scroll wheel present on the remote. Users can even set up custom macro button activity func-

tions to perform a series of actions with a single click. The device also comes with a wireless hub and app, so you can control your devices without even pointing the remote directly at them. You can connect your devices using IR, WLAN, or Bluetooth. Using the accompanying app, you can even turn your phone into a backup remote which can be used in case you can't find your remote right away. The Sofabaton is also Alexa and Google Assistant compatible. What's more is that it even comes with a 2-inch touch display that can be used to control your devices or tweak with the remote's settings.
