THE ADVENTURES OF TINTIN

Developer: Moulinsart

This one is really well done, with great intros that tell you a bit about the background story to get you to purchase a comic. The whole collection costs ₹5200, and each book costs ₹349. The downloading animation is Tintin and Snowy running. The interface itself is very simple, with just swipe and zoom options. Each comic comes with an ebook known as Young

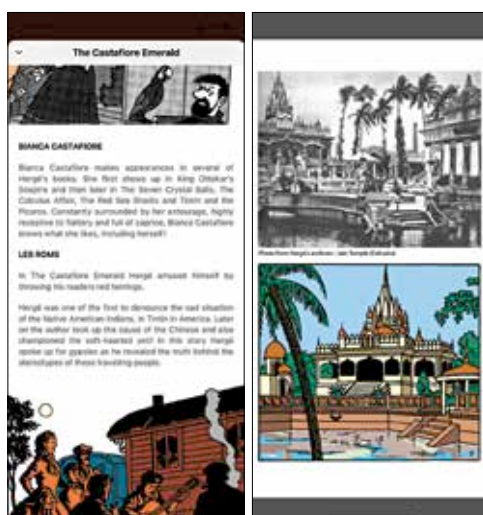

Readers that tells the real life inspiration behind each comic, placing the writing and publication within a timeline, and tracing back individual panels to events in Hergé's life, or photos from his archives. Young Readers accompanies every Tintin comic, and really helps understand where these stories originated from. Some comics though have extra companion volumes with a ton of additional information. These may be Travel Diaries, that are historical encyclopedias of the countries visited, with comparison of the panels to photographs of real world places, or Dossiers, which are technical analysis of the instruments, machines, places, geography and science in the comics. The Travel Diaries for India are available with the Cigars of the Pharaoh comic.

The extra ebooks are only available for those who purchase the comics, but become available if you just download the sample pages. Unfortunately, if you do this you can no longer read the really cool and well laid out pitches. The ebooks are a window into the extensive research done by Hergé. After consuming all the content on the app you just have a much deeper understanding of all places Tintin visited, and the science behind everything from moon rockets to submarines.

TINKLE COMICS

Developer: Amar Chitra Katha Private Ltd

There are two apps on the store, Tinkle Comics and Tinkle Digest. The one we used is Tinkle Comics, Tinkle Digest just routes it through Magster. Now this might come as a bit of a newsflash, but Tinkle stopped the physical production of the magazine in April, because of the pandemic. It made a pretty smooth jump into being entirely an app, and now there is a new volume that comes out every monday, as against one every fortnight. This transition happened in what is 40 years of the comic's existence. You can buy each of the vol-

umes individually, but there are also various subscription tiers, with a lifetime access to all content for ₹2000 (incl taxes), and a small maintenance fee every five years. Now the app is an all in one portal for accessing kid friendly content, including magazines, games, books and videos. Of these, the books section is not original content, but jumps to the I Can Read! Series by HarperCollins, which are particularly designed to help children of various skill levels learn English. The back catalogue starts from 2018. Tingle Magazine, Tinkle Digest, Tinkle Double Digest and Tinkle Toons are available. The last of these can totally satisfy the nostalgia itch as there are compilations of stories
