

Canon EOS R3

Canon's entry into the mirrorless camera segment was late and has ever since been playing catch-up against the likes of Sony. But with the new EOS R3, it would seem the chase is finally over. This professional camera from Canon is currently the mirrorless equivalent of the Canon EOS 1D series boasting top of the line specs and a big professional body. It would not be an understatement to say that the EOS R3 is designed for pure performance. It can trade blows with the best, boasting a 30fps shooting speed in burst mode thanks to the

processing prowess of the DIGIC X image processing chip. It is also capable of shooting video at a max resolution of 6K at 60p in RAW along with 4K at 120p in 10-bit uncropped format. A feature that promises to be truly state of the art though is the new Eye Control AF which basically allows the user to change Auto Focus points by merely moving the eye. This feature is only available while using the viewfinder though and the usability and accuracy can only be vouched for once we get our hands on it. While on the subject of Auto Focus, the R3 also gets a new Vehicle Priority Auto Focus mode that is designed to keep fast-moving vehicles in focus making it ideal for motor racing photography. The Canon EOS R3 will set you back ₹4,99,995 (body only).

Casio G-Shock Mudmaster GWG-2000

Forged carbon parts and a case of carbon fibre reinforced resin. That's what the latest from the tough as nails watchmaker, G-Shock, has to offer on the new Mudmaster. Well we all probably know that carbon fibre is not forged, but the process Casio has used to fashion some of the parts is eerily similar to forging. The process involves carbon fibre particles mixed with resin that are pressed at high heat and pressure into the desired shape. See what they mean when they say "forged" now? Well, the reason for this fancy and probably painstaking process is simple. The end result is parts that are stronger and lighter than stainless steel and it also gives the new Mudmaster a unique black and grey surface pattern. The new Mudmaster is astonishingly resistant to mud and dust with newly designed Mud Resist buttons. The watch also features Multi-Band automatic radio time syncing, pressure, altimeter and barometer sensors, compass and thermometer. It can also do well underwater with the GWG-2000 boasting a 200-meter water resistance.

Ducati Monster 2021

The best selling bike Ducati has ever made is here and it's more than just an incremental update. Dropping the trellis frame, the new Monster features a Panigale V4 (the biggest, baddest bike in the Ducati line-up) inspired aluminium front frame that weighs just 3kg. To put that into perspective, that's 4.5 kg less than the trellis frame seen on the outgoing model. A dose of steroids has also been given to the engine which is now a 937cc Testastretta L-twin unit that is also used in the Multistrada 950 and the Supersport. The increase in engine size has also increased the power and torque figures which are 111hp and 93Nm respectively. While the engine size may have gone up a notch, the fuel tank capacity though has been reduced by 3.5 litres with the Monster now getting a 14 litre fuel tank. In terms of safety and features that make life easy the Monster gets an updated suite of electronics like wheelie control, Ducati Traction control, cornering ABS, Ducati Power Launch, and three power modes, namely Urban Touring and Sport. All the features can be adjusted and fine-tuned using the 4.3 inch TFT display and handle-mounted controls.
