

Ransomware gangs complains

Ransomware gangs are shocked to find out that cyber crooks will scam other criminals if they can. <https://dgit.in/oct21-89>

Cause for alzheimers found?

Likely cause of Alzheimer's identified in new study. <https://dgit.in/oct21-90>

Hey there!

Digit magazine has been a part of my life and definitely has some contributions to me being sort of geeky. I remember that evening when my mother bought me a copy of a digit at a bus stand, at some point in my childhood. I was like Maan!! This thing has so many technological things. There's an uncle of mine who is a computer engineer, who praised me for being a reader of digit as a child. Aha! good ol' nostalgia hits when I remember those AR things on the cover page and on some pages.

As for feedback or rather something of a suggestion, I would like to read an Audiophile section in digit, which separately has the reviews of all the music equipment and headphone, all the way from the entry level stuff to high grade and premium. Being a music listening person myself I can say that there are people who do try to find some good reviews and suggestions for hi-fi music listening.

My greetings to "Raaabo" and whole digit team :D

—Anaadi Dubey

Dear team Digit, it's been a while since I read digit, I used to read it in my college library and since March 2020 I didn't get a chance to read it. So when I got my first month salary (done with College now) the first thing I did was (actually the second thing) subscribe to digit(True story) and when it got delivered it felt nostalgic for some reason. When I started reading it I was very happy to realize that it's still Amazing ("I'm still worthy").And yeah after a long long time I felt like a tech Guru. So thank you for that team Digit. Keep rocking.

Regards

—Shivaram

Dear Editor As you have sought feedback from the users of Digit magazine, I am sharing a few tips which I feel can make Digit a complete IT magazine.

Akshay Pendawle,
Letter of the Month
winner of August 2021
issue loves his Kindle!

1. Incorporate articles related to new development in IT in addition to gadgets information etc. that you are already providing.
 2. Add new open source software developed for different domains providing links to their source code etc. so that interested users may try to download, use and amend the same for further development.
 3. Incorporate interviews from CTO of large organizations related to increasing use of technology in different functional areas of their organizations.
 4. Start providing some statistical data related to growing use of IT applications and hardware in different industries on a monthly and yearly basis using authentic source.
- I am sure with these changes Digit can become a complete IT magazine in all respects.

Regards,

—Jitender Sharma

I'm a home maker graduated from IIT Madras in 2002. I found digit when my Husband Rishabh has once bought it. Here is my journey with digit from then on.

Once upon a time, there was a wonderful magazine called Chip, which taught its readers the basics

of computers - how to use them, tweak the software, and repair the hardware.

Somehow, it metamorphosed into Digit, as a butterfly emerges from a pupa. It was very interesting, looked at all the new things coming into the market, and had interesting sections like Tips and Tricks and two CDs of software-mostly shareware.

We have tried PCquest, ComputersToday, dataquest. After all, they are also putting their best efforts to make the common man get IT into his grey cells.

But I'd certainly give the members of the digit a HIGH FIVE just because they put IT together so neatly & so immaculately.

The quality of paper is excellent & I won't have any qualms in giving 11/10 to the editorial team for using fantastic english and mind bending topics devoid of any kind of apparent flaws.

Digit feels like home.

Digit is those type of rare magazine where the readers prefers the advertisements also with care. There is an advertisement index in this book. You guys handle the balance for advertisements quite well, sometimes I actually find them useful so I don't mind.

Previously digit used to do Mobile Camera Comparisons, Streaming Services Comparison etc. I wish to see more of it.

Please cover more Infographics like "Fight the Pandemic", "Anime Recommendations by Genres", who doesn't love Infographics.

I love Digit App Suggestions, but sometimes try to include web applications too.

Some serious drawbacks I found with Digit:

It comes only once a month !!!

One thing I can be sure about digit is, it's like crack, once you taste it, there is a big chance that you will get addicted to it.

P.S : Please bring back the Back-Byte Section. The BackByte section used to be quite unique. I miss the jokes about machines and softwares.

—Manjula M & Rishabh
