I am a subscriber since 2007/08. I found the magazine in a newsstand and started reading it on my journey. I wasn't much of a reader back then. I was fret that I was about to complete the magazine. I kept rereading the magazine until my subconscious mind signalled me "You're all caught up".

And I must admit that I'm never caught up reading digit. I still have all my digit issues since back then and I just place them in my book shelf to signal that "hey, look, I'm a digit reader", just so that I could show off all my issues and get others into reading.

I have gotten into that point of stage, where it went like, you must

read this 2009 cover story which predicted what could future look like and they were true, Oh and you must check this dmystify which covers this topic as you're interested in it ... They eventually subscribed to digit and almost everyone fell in love with the dmystifys.

The cover stories just hit differently, oh boy, the fastracks and the SKOAR Poster (Been using the RDR2 Poster in my bedroom since 2 years and giving the other Posters like a giveaway to my friends, until my current poster goes in bad condition). In a world of dopamine-ridden-tech addicts, digit makes me nerdy, satisfies my know-it-all curiosity and

made me gave up on facebook inc. I love the DVD Content, I enjoyed the James Burke Connections Documentary where he talks about technology trap and stuff. Please try to include similar jewel documentaries.

Coming to the feedback part:

The magazine quality only improved since 10+ years. I'm quite busy these days and I'm getting acquainted with the digital version of the magazine. The new version of digital magazine is great, the readability has improved a lot.

I would love to hear what technologies/apps the digit team is using and why?

digit diary

We've always taken pride in our Intern Enrichment Programme (IEP). It is the amalgamation of the sweat, tears and fears of all the interns who've graced the Test Centre. Many of our past interns have gone on to scale the heights of the corporate world, become creative geniuses and one might even be close to solving world hunger. Their successes after being part of Digit is testament to the prowess of the IEP which is now in its 3rd iteration. Alas, we've taken on too many interns now, so they've sort of banded together, in a show of unity and taken it upon themselves to make fun of the proctors of the IEP. We now understand that the IEP is susceptible to the same pitfalls that our education system suffers from. We're talking about overpopulation. Does this mean that the IEP has come to its natural end? What happens

to our interns? Where will they go? Who will do the snippets? ...

All good questions. And we do have an answer - Batoru Rowaiaru. One of us will have to put on the mantle of Kitano and get the interns to duke it out between themselves. Some will be hurt, some will be emotionally scarred. But from among seven interns, there shall arise one. One who has the power to do it all - articles, booklets, lists, ... , SNIPPETS! Watch this space to know who ends up being the INTERN CHAMPION.

In other news, we've got a new guy - Ali. The boy comes to us with nearly three years of experience under his belt. It's a pity that none of it matters. The dude shall forget how things were done at his previous workplace and learn to do things our way, the right way. The only thing that we

can tell you right now is that Ali has a voice that could make grown men weep. It's the once in a lifetime talent that will change the entertainment industry forever. So it's a good thing he's not in the entertainment industry. You'll see him soon in our videos.

We've started cleaning up our offices. Everyone's doubly vaxxed and eager to return to working from the office. It's quite likely that the next issue might just be produced completely from the office. As for gaming, well we can't tell you much about what we're playing. You know, because of embargos and what

not. However, we can tell you that Manish and Dhriti have been checking out Pokémon Unite and Mithun was reliving his childhood playing the AOE IV stress test. Adi's still playing warframe and the new guy Ali, well, he barely plays. We'll change that soon.

QUOTE OF THE MONTH

"Yes"

— Staff members when interns ask how many snippets need to be done.
