Transforming the shopping experience

Learn more about Degpeg, a homegrown cloud-based live commerce platform

Dhriti Datta | dhriti@digit.in

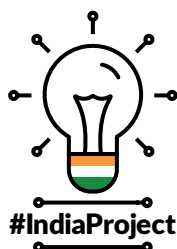

Over the past few years, we've seen companies and brands try to leverage the power of live

streaming to rope in more user engagement and create more brand awareness to varying degrees of success. The model saw enough success in its infancy years and has been growing ever

since. As per GWI Social Media Trends Report 2020, 1 in 5 people discover new products and brands through social media live streams, so this new model definitely has merit. The growing popularity of live streaming has

ushered in Live Commerce, a new iteration of e-commerce sprinkled with live streaming elements.

E-commerce already set the precedent for this, by moving countless people away from physical stores and malls in favour of shopping in the

digital world. Live commerce takes it a step further by fusing online shopping with live streaming. Customers can shop directly from live streams of launch events and this is starting to become a viable method for brands to market and sell their products. Enter Degpeg, a homegrown live commerce platform that is bringing in the "new era of e-commerce" to the Indian market as well. Degpeg allows for the selling or marketing of any product or service by live streaming on both web and mobile platforms.

HOW LIVE COMMERCE IS DIFFERENT FROM E-COMMERCE AND ITS BENEFITS

Live streaming has been gaining a lot of traction over the years. In China and few other countries, live commerce is already a pretty established model that e-commerce and retail companies have been leveraging. As teleshop-ping allowed consumers to watch a broadcast, get an idea of the product, and then buy by calling a number to place your order, live commerce allows consumers to watch a live broadcast of the product and then order from the live stream itself. All this without having to meander through the internet and look for the product like you would with typical e-commerce. It can be likened to the digitalisation of teleshop-ping. Additionally, with live commerce, a user can consume information about a product or service in real-time and buy it immediately if it appeals to them, which is entirely different from standard e-commerce.

We spoke to Vipul Jain, Founder and CEO at Degpeg, who shone some light on live commerce and its benefits. Jain said, "the infrastructure for live commerce to shine is pretty solid now. With 4G in place all over the country, people already watch live videos on the go. That's the first thing that's happening in this space. The second aspect is the major shift of customised or personalised content that is taking place. All the large media houses worldwide have already moved to OTT platforms, so video content is
