big and here to stay. Additionally, now the consumers are also inclined towards watching content in video format. So, social platforms such as Facebook, Instagram, and others have seen live streaming on their platforms flourishing. So, you can say that the entire ecosystem is shifting towards it (video). That is the

reason live content or dynamic video content is picking up at a rapid pace”.

While live commerce is still in its infancy stages, especially in India, it does come with a fair number of benefits. Jain stated, “The first benefit of live commerce is its scalability. You can scale a product from any geographical location to another one in itself. The scalability goes from the web to mobile, to social platforms. The second advantage is that it is very robust and it is extremely easy to use. The next advantage is that we have integrated web, mobile and social platforms. So, it is a very unified platform”.

Companies or influencers can leverage the power of live streaming to launch products, show product demos, conduct webinars, unbox newly-launched products, and even review products. All in real-time. Live commerce also increases customer engage-

ment. In traditional e-commerce, there's very little room for customer engagement, however, with live commerce brands can connect with customers on a more personal level. It allows them to connect directly with consumers that may have a high intent towards buying your products, allowing for better conversion rates.

DEGPEG AND ITS KEY FEATURES

Degpeg is a cloud-based B2B social commerce platform that can enable multi-streaming on various social platforms within itself and allow for online shopping from these live streams. Jain told us, “Degpeg is essentially like Shopify. It enables live multi-streaming from the brand's own website to connected social platforms. Brands are looking for a platform where they can not only unveil or discuss their new products and launches but also one where the user can click and buy the product or service from the platform itself.” Degpeg offers a CTA (call to action) feature where you can not only watch live video content but also buy whatever product or service is being talked about right from the stream.

Jain also stated that they've ensured that Degpeg is very easy to use, even

for those who aren't very tech-savvy. Jain said, “All you need to do is log in to your admin account and you can immediately start broadcasting your live content or pre-recorded content with ease. Also, since Degpeg allows for multi-streaming to various social platforms, you don't need to manage your live content, or even pre-recorded content, across multiple platforms. Using our platform, you can manage all platforms via our admin in one place”.

Some of the key features of Degpeg are the following:

1. Company and product updates

- Brands and companies can live stream all the important information and updates with their community on all their social platforms from one platform via multistreaming. Companies don't have to manage several live streams at the same time and can manage all of them via the Degpeg platform simultaneously.

2. Commerce integrations with flash sales and offers

- Degpeg allows brands and companies to generate revenue over live streams by offering a 'Buy now' option right from the live broadcast. Additionally, these brands can also broadcast special offers for a limited time during these live streams.

3. Live streaming analytics

- Brands can measure the performance of their live streams on all connected social platforms from a single screen itself.

4. Studio

- Degpeg allows brands to enhance their live streams by using studio features which allows them to overlay their branding, split the screen to add videos or a guest speaker, and much more.

5. Live Chat

- Using this feature, brands can monitor and respond to chats/comments on live streams across connected social media platforms by using Degpeg's unified dashboard.

6. Broadcast of pre-recorded videos

- Alongside live streaming, Degpeg also allows brands to broadcast pre-recorded content. **d**
