Xiaomi Mi Notebook Ultra

Best laptop in this price range?

The Mi Notebook 14 marked Xiaomi's entry into the laptop space in India last year. The new Mi Notebook Pro and the Mi Notebook Ultra are the true successors of the Mi Notebook 14 we all were waiting for. In this review, we will dive deep into some key aspects of the laptop.

BUILD	88
FEATURES	90
PERFORMANCE	80
VALUE	90

with gestures and tracking, but clicking the bottom half of the trackpad still feels "budgetty". Moving on to IO, you get a Type-C USB port and Thunderbolt 4 for charging and two USB Type-A ports. Additionally, you also get an HDMI port and a 3.5mm combo jack.

DESIGN AND BUILD QUALITY

The chassis of the laptop is made out of Aircraft grade Series 6 Aluminium and it weighs 1.7kgs. It's not as wafer-thin or lightweight as, say, the MacBook Air, but it screams quality. Other additional features like the built-in fingerprint scanner on the power button make it very convenient. Not to forget, there's also a webcam now on top of the display. The laptop is also fitted with dual 2W stereo speakers with support for DTS audio processing app.

KEYBOARD, TRACKPAD AND IO

Xiaomi says it is using the scissor mechanism for the keys and they feel similar to the keys on a MacBook. They're very comfortable to type on with 1.5mm deep key travel. The good thing about the keyboard is that it comes with backlighting. Moving on to the trackpad, the smooth finish helps

DISPLAY

The Mi Notebook Ultra not only has one of the best displays you can find on a laptop in this price range, but we think it's also one of the best laptop displays we've ever used. Yes, other OEMs offer laptops with both bigger and higher resolution panels but the Mi Notebook Ultra's 15.6-inch 3.2K panel with a 16:10 aspect ratio hits the sweet spot for us.

PERFORMANCE

The Mi Notebook Ultra we got for review is powered by the Intel Core i7-11370H CPU. It makes the Mi Notebook Ultra more powerful than some other ultrabooks on the market. But, this comes at the cost of thermals.

In Cinebench R23, the Mi Notebook Ultra managed to score 5,539 in the multi-core test and 1,527 in the single-core test. The Mi Notebook Ultra also managed to score 5,034 in PCMark 10, which is higher than some other

ultrabooks on the market. Even outside of the world of benchmarking, the Mi Notebook Ultra excels in putting up with our day-to-day workloads too. Not having a discrete GPU may sound like a deal-breaker but the Iris Xe Graphics with 96EU powering this machine is no slouch either. It handles most of the 3D workloads very well. We were able to play multiple games of Valorant on this laptop and it was indeed an enjoyable experience thanks to that 90Hz panel. The laptop throttles occasionally while running some resource-intensive application, but we are happy to report that it is not a common occurrence.

BATTERY LIFE

The Mi Notebook Ultra packs a 69,993 mWh battery, which Xiaomi says can last for 12-hours worth of usage. It charges via a 65W Type-C power adapter. In terms of battery performance, the Mi Notebook Ultra managed to last for around 7 hours and 20 mins with brightness set to 100-percent. This is one of those machines that can easily last you for an entire day before forcing you to look for a charger.

VERDICT

The variant of the Mi Notebook Ultra we tested is the most expensive option priced at ₹76,999. For that price, you are looking at a fantastic laptop that comes with one of the most beautiful displays, a powerful 11th generation Intel Core H-series processor, and an extremely well-built machine. The Mi Notebook Ultra is indeed the laptop to beat in this price range.

—Karthik Iyer

SPECIFICATIONS

PROCESSOR: Intel Core i7-11370H 3.30GHz base clock and 4.80GHz max turbo, 35W | GRAPHICS: Intel Iris Xe Graphics with 96EU | RAM: 16GB DDR4 RAM 1600MHz | STORAGE: 512GB Kioxia NVMe SSD | DISPLAY: 39.6cm (15.6) Mi TrueLife+ Display, 3.2K resolution, 16:10 aspect ratio
