TCL C825 65-inch 4K Mini LED TV

Fantastic picture performance

A lot of brands including TCL, Samsung and LG have started launching Mini LED TVs in India. TCL announced its C825 mini-LED TV at the beginning of the year and it is available in India in 55 and 65-inch screen sizes. We have the 65-inch variant with us for review. Let's dive deep into the review.

BUILD AND DESIGN

Well-built and premium is the first thing that comes to mind when you see the TCL C825. It isn't the slimmest TV out there which is fine considering the features it packs under the hood. The grey fabric finish hides the front-firing speaker drivers and it also adds an elegant look to the TV. The stand holding the TV in place is sturdy and is a single central stand.

The connectivity options are two USB ports, four HDMI ports, ethernet, AV In, 3.5mm aux, optical and antenna ports. The remote control is a simple candy bar remote control offering function over form. It has dedicated OTT hotkeys for services like Netflix, Prime Video and Zee5.

UI

This is where the TV suffers and shows inconsistencies. It runs on Android TV 11 and comes with a stock UI. While the TV UI works well, for the most part, there were times when Netflix froze, the Google Assistant refused to work and the UI lagged. We were forced to restart this TV on more than one occasion. We hope TCL can fix the bugs in the UI via an update as it is the only Achilles heel in an otherwise good TV.

DISPLAY AND PICTURE PERFORMANCE

This is the first Mini LED TV that we have tested. The TV boasts of a 4K resolution with support for all popular HDR formats including Dolby Vision, HDR10, HDR10+ and HLG. The TV

is also the first we have tested to come with support for Dolby Vision IQ. Kicking things off with our Calman analysis, this TV is the brightest we have tested, crossing the 1000 nits mark at the 5 to 10 percent window and gives us sustained brightness of over 500 nits which is extremely impressive.

However, when it comes to colours, the TV has a cool bias even on the cinema preset with a warm colour temperature selected. However, the TV's its real-world performance tells a different tale.

"Holy smokes, this TV can get bright!" is the first thing that will come to mind when you start consuming HDR content. The bright highlights can get really bright while retaining all the details in the dark areas. While the colours aren't as accurate as what we saw on the X90J, they still get the job done very well.

The TCL C825 supports 4K at 120Hz (natively) along with RGB HDR. It has four HDMI ports, two of which support HDMI 2.1 including eARC. The TV also supports VRR, but we don't have an Xbox Series X to test that. We do, however, have a PS5 and played a lot of games on the console on this TV. If you are looking for bright, punchy colours and a good gaming experience, then the TCL C825 can

definitely be a consideration.

As for audio, the TCL C825 comes with 60W of sound output for the 65-inch variant - two 15W drivers and a 30W subwoofer. The sound can get really loud and detailed and unless you are finicky for good bass, you don't need a soundbar with this TV.

VERDICT

The TCL C825 is a fantastic TV for content consumption. It can get very bright delivering a very good HDR experience while retaining good details in dark areas. It has very good colour reproduction for SDR content as well. It also comes with two HDMI 2.1 ports with support for 4K at 120Hz, VRR and ALLM making it a great TV for those looking to play games on a PS5 or Xbox Series X on this TV.

—Sameer Mitha
