

Hypersonic cruise missile flight

DARPA has announced successful free flight test of an air-breathing hypersonic cruise missile. <https://digit.in/oct21-27>

Slack went down

Slack is down for some people, and of course, the problem is DNS. <https://digit.in/oct21-28>

Realme Book (Slim)

Off to a great start

Realme has made a splash with the launch of its first laptop, the Realme Book (Slim). Starting at ₹44,999, the Realme Book (Slim) offers a bevy of features that were unheard of in this price range. Here's how it fared in our review.

BUILD	90
FEATURES	85
PERFORMANCE	80
VALUE	90

trackpad we've used on a laptop in this price range. You are

looking at a 3-level Backlit keyboard with keys that have a 1.3mm key travel.

The trackpad is much better than even the one on the Mi Notebook Ultra.

The port selection, however, could have been better. You only get 2 USB

Type C 3.2 gen 2 ports, a USB Type-A 3.1 Gen 1 port, and a 3.5mm headphone jack on the Core i3 variant.

PERFORMANCE

The Realme Book (Slim) comes in two variants, both of which are powered by Intel's 11th generation Core processors. We were a little sceptical about Realme going for a dual-core processor for its first laptop. Yes, it is for the base variant of the machine but it is still an unusual decision in such a specs-heavy market. In certain use-cases, this dual-core processor can lock-horns with the Intel Core i7-10510U that's powering the Mi Notebook 14 Horizon Edition from last year. In PCMark 10, the Realme Book (Slim) managed to score slightly higher than the Mi Notebook 14 Horizon Edition powered by the i7-10510U.

This is exactly why the base variant of the Realme Book (Slim) is great for most use cases for people shopping for laptops in this price range. In

real-world usage, we had absolutely no issues working on a dozen Chrome tabs with a handful of other apps running in the background.

The Intel UHD integrated graphics is obviously not the fastest unit, so your gaming performance is going to be very limited, to say the least. You can run some esports titles like Valorant and Dota 2 at low graphics settings, but don't expect anything crazy.

BATTERY LIFE

Realme Book's 54Whr battery is rated to last for 11 hours on a single charge. We'd say it's good for about 8-9 hours of usage on a daily basis. That's enough to get an entire day's worth of usage out of the machine. The Realme Book's battery can be charged via a 65W USB-C power adapter.

VERDICT

The Realme Book (Slim) is priced at ₹44,999 in India for the base variant that we reviewed. For that price, you are getting a fantastic machine with a 2K display, a beautifully thin and light form-factor, a great keyboard and trackpad combo, and reliable performance for day-to-day workloads thanks to the 11th Gen Intel Core i3-1115G4 processor.

The Realme Book (Slim) is arguably one of the best laptops in this price range. If you have a budget of ₹45,000 and you are not looking to bother with any resource-intensive workloads, then look no further. It's also going to be our go-to recommendation for professionals looking to buy a reliable machine for office work. Xiaomi's Mi Notebook Pro/ Ultra comes close and they should be on your list too if you are willing to extend the budget. .

DESIGN AND BUILD QUALITY

The Realme Book is absolutely stunning and it's arguably one of the best-looking laptops you can buy in this price range. The Realme Book (Slim) has a high-quality aluminium body that weighs approx. 1.38 kg. The construction is definitely sturdy and feels super premium to use. We also love the fact that Realme has added a fingerprint scanner that's embedded on the power button. There's also a 720p webcam making it better than a lot of laptops on the market. We also want to mention the dual HARMAN Speakers with support for Stereo Surround Sound by DTS. The Realme Book (Slim) sports a 14-inch 2K display which we think is the highlight of this laptop. It has a 3:2 aspect ratio that's not very commonly seen in most laptops.

KEYBOARD, TRACKPAD, AND IO

The Realme Book (Slim), in our opinion, has the best keyboard and

SPECIFICATIONS

PROCESSOR: 11th Gen Intel Core i3-1115G4 dual-core processor with 3.0GHz base clock and up to 4.1GHz turbo boost, 28W TDP | GRAPHICS: Intel UHD graphics with 48EUs | RAM: 8GB DDR4 3733MHz | STORAGE: Samsung 256GB NVMe SSD | DISPLAY: 14-inch IPS 3:2 2160x1440 panel with 100% sRGB
