

Antiviral pill for Covid

Merck says a trial shows it has produced the first effective antiviral pill for Covid. <https://digit.in/oct21-59>

More Vitamin C for Humans?

A recent study by Sorby Research Institute suggests that humans need to up their Vitamin C intake. <https://digit.in/oct21-60>

NGC 3627

Distance: 31 million light years

Constellation: Leo

Also known as Messier 66, the gravitational influence of this galaxy on nearby galaxies indicates an extremely high mass concentration. This galaxy is also full of novas, with astronomers spotting no less than five exploding stars in the same galaxy since 1973.

NGC 4254

Distance: 45 million light years

Constellation: Coma Berenices

Also known as Messier 99 is another "grand design" galaxy with wonky arms. One of the arms is tightly wound, while the other is loosely wound arm that is extended. There is suspected to be a dark galaxy in the vicinity that is exerting a gravitational influence on NGC 4254.

NGC 4303

Distance: 55 million light years

Constellation: Virgo

Also known as Messier 61, we should note here that Barnaba Oriani discovered the same galaxy six days before Messier in 1779. Although, he thought the object was a comet. It has an active galactic nucleus, and has a high rate of star formation, and is as such a starburst galaxy.
