### Algorithm decides your fate

In San-Francisco, an algorithm decides who is homeless enough for housing!

### The Standard Model

The Standard Model includes the electromagnetic, strong and weak forces and all their carrier particles, and explains well how these forces act on all the matter particles. The standard model equation encapsulates the entirety of physics within it, there are no specific graphs for it, but if you visualize the standard equation, you'll be able to see the whole observable universe.

### Golden ratio

You have probably heard about the Golden Ratio. Many artists, architects, and musicians consider the golden ratio when creating their work; and the ratio is said to be evident in the Parthenon temple, and the Last Supper painting, among others.

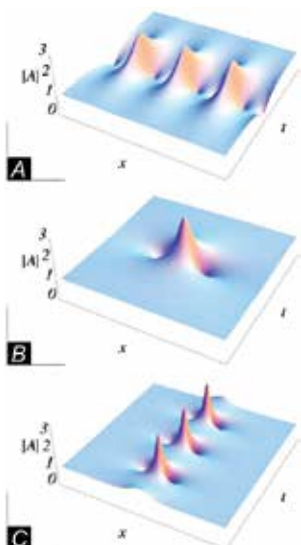

### Maxwell's equation

This set of equations not only looks beautiful but is also the foundation of classical electromagnetism, classical optics, and even electric circuits.

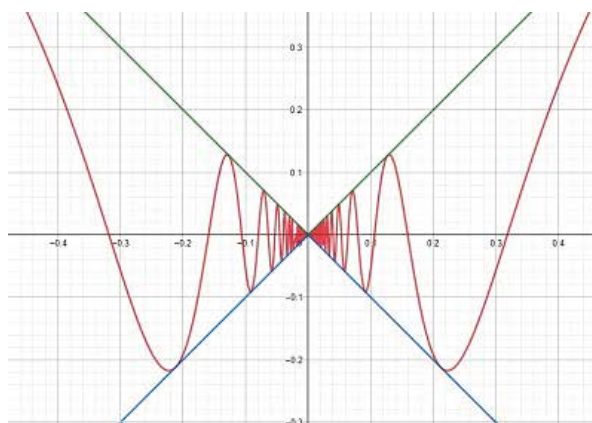

### Benice equation

Benice equation is related to the science of making art with the help of the rotation of circles. You have to set values and parameters and the equation will provide you with a hypnotic visualization!

### Non-Linear Schrodinger equation

If you have heard about quantum mechanics or quantum physics or have watched avengers end-game and heard the word quantum entanglement, the 3D plotted graph you are looking at is the base of all that.

### Graph of $x \sin(1/x)$

If we're going to talk about mathematics, we cannot leave out trigonometry, it may have seemed boring in the 10th standard but the graphs of trigonometry will always amaze you. One of the most basic equations in limits uses trigonometry and graph it plots it just chaotic.
