Hackers are creating Squid Game themed malware apps

Netflix's Squid Game has grown to be one of the most popular shows, garnering \$891.1 million since its release and hackers have developed Squid Game themed malware to steal users' personal data and banking information. Lukas Stefanko, who works at ESET, uncovered that the app 'Squid Wallpaper 4K HD' plays host to the Joker malware. This app has already seen over 5000 installations on users' smartphones. According to Stefanko, the Joker malware allows hackers to send "malicious ad-fraud and/or unwanted SMS subscription actions." These actions can bombard you with fake transaction messages or ads that inspire you to sign up for services. The money spent on these services is wired to the hackers and even though Google has removed it from the PlayStore, it can still function if it is installed on a smartphone.

MOBILE WATCH

Oppo Fold

Oppo is rumoured to be working on its first foldable smartphone that could debut in November, as per the latest reports. Some of the key specs of Oppo's foldable phone have also been leaked suggesting next-gen hardware and could be called the Oppo Fold. According to a post on Weibo, the Oppo Fold's design is expected to be similar to the Galaxy Z Fold 3 with an inward folding display. It is tipped to feature a large 8-inch LTPO OLED display with upto 120Hz refresh rate and it is said to be powered by the Qualcomm Snapdragon 888 chip and might be equipped with a 4,500mAh battery that supports 65W fast charging. It will also likely run on ColorOS 12 but it remains unknown whether it will be based on Android 12 or 11. As for the cameras, the phone is tipped to have a 50MP primary camera that likely uses the Sony IMX766 sensor and a 32MP selfie camera.

APP WATCH

Project Activate

Most of us take using our smartphones for granted, operating them with our hands or voice commands such as "Hey Google". However, for those with severe motor impairments and speech disabilities, it may not be quite so simple. To that end, Google launched an app called Project Activate that lets people use facial gestures or expres-

sions to activate custom actions such as making a phone, sending a text, and other basic actions. The app leverages your smartphone's front-facing camera to look at your face and detect your facial expressions. These expressions

can be mapped to certain actions on a smartphone, like we mentioned above. This could be a gamechanger for how people with medical conditions such as

cerebral palsy, muscular dystrophy or other speech and motor impairments operate their smartphone. All you need to do is install the app from the Google Play Store and then set up gestures as per your preference. You can pre-configure various gestures using the app such as smiles, head nods, frowns and more. Users can also create a list of phrases that can be automatically entered into a message upon using a predetermined gesture. The app even allows users to adjust sensitivity levels to pick up even the slightest and simplest gestures. So, even if the user has extremely limited mobility, the sensitivity can be bumped up super high to ensure that it registers.

FUNetix

FUNetix is a nifty reading app for kids that claims to be able to teach them to read in 12 hours. It is for kids between the ages of 5-9 and contains 40 modules with narrated animations to make it interesting.

OpenSea

OpenSea is an NFT marketplace app that allows users to keep track of their NFT collection and discover new assets from the digital market. Currently, you can't buy NFTs on this app as it is more for keeping track of existing NFTs.

Sky Weatherman

This is no ordinary weather app. It has a surprising amount of customisations allowing users to set filters to get warnings or alerts according to their preferences and provides hyperlocal weather alerts.
