LG C1 55-inch 4K OLED TV

Fantastic picture performance, unmatched gaming features

Every year, LG has delivered excellent performance with its OLED TVs. Today we have with us the LG C1 and it's a part of LG's 2021 portfolio of OLED TVs. But is it still the best gaming OLED money can buy?

BUILD AND DESIGN

In terms of design, the C1 is identical to the C9. The panel is extremely slim, with almost no bezels but it is slightly thick towards the bottom, where you have the components and connectivity options.

DISPLAY AND PICTURE

Our Calman analysis, revealed a peak brightness of 750 nits. The display is fairly colour accurate and, in the Cinema, preset we got an average delta error of 1.4 which is great. When it comes to HDR performance, we got some of the best colours and accurate performance from this TV. In a show like Our Planet, the colours just pop and even animated content has depth and vibrancy. While an OLED panel can get reflective in a well-lit room, it is in a dark room that the performance of this TV really shines with no form of hallowing or blooming appearing on the display.

GAMING PERFORMANCE

The LG C1 supports ALLM (Auto Low Latency Mode), VRR (Variable Refresh Rate), 4K at 120Hz, G-Sync and Free Sync. If you have an Xbox Series X, PS5 or the RTX 30 series GPU then, you can take full advantage of this TV. LG has also made changes to the gaming UI of this TV. You get this vibrant purple UI at the bottom of the display giving you information like FPS, black stabiliser, Low Latency, VRR, etc. The TV has different settings for game modes and can be set from this UI.

Price
₹1,41,490

When we fired up games in their 120Hz modes, the UI recognised the high refresh rate and displayed the same, seamlessly, which is impressive.

All the games we played, looked fantastic with deep blacks, vibrant colours and was super immersive. If you are looking for a TV for the best gaming experience, then you should consider the LG C1.

AUDIO PERFORMANCE

While the picture is great, the audio output suffers slightly. The LG C1 has a 2.2 Channel set up with 40W of sound output. The speakers on the TV support Dolby Atmos, but don't expect the sound to surround you. While dialogues and background scores are easily audible, the distinct lack of channel separation is missed.

UI

One of the biggest changes to the LG C1 is the UI. It now takes up the entire screen with the first page filled with content suggestions, smart capabilities and tips and tricks. Then we have a row of apps, sources, and the home dashboard. The TV still comes with a magic remote and the settings have been shuffled around.

REMOTE CONTROL

LG has redesigned the remote control for the C1. The new remote feels slightly less weighty at the bottom making it more ergonomic to use as a magic wand. You also have more OTT hotkeys and slightly bigger buttons at the bottom along with dedi-

cated buttons for Google Assistant and Amazon Alexa. The remote also has an NFC chip so simply tapping your smartphone to the remote enables casting onto the TV.

VERDICT

The LG C1 is a fantastic OLED TV and lives up to the C series legacy. Its gaming performance and new UI is superb. The audio output is average and works well for a small room but for larger areas, a soundbar would be a nice addition.

—Sameer Mitha

SPECIFICATIONS

PANEL SIZE: 55-inch (available in 48, 65 77 and 83-inch screen sizes) | PANEL TYPE: OLED | PANEL RESOLUTION: 3840 x 2160 - 4K | PANEL REFRESH RATE: 120Hz | HDR 10 SUPPORT: Yes | HDR 10+ SUPPORT: No | DOLBY VISION SUPPORT: Yes | WEIGHT (WITH STAND): 41.6 kgs | HDMI PORTS: 4 | USB PORTS: 3 | BLUETOOTH: Yes (v5.0) | WI-FI: Yes | ETHERNET: Yes
