Dizo Buds Z

Eye-catching design

Dizo, a brand under the Realme Tech Life ecosystem, having already launched 3 entry-level TWS this year, has now launched its fourth TWS earphone – the Dizo Buds Z. Priced in the sweet spot under 2K, these earphones aren't the most feature-laden entry-level TWS we've tested yet, but they still offer considerably more than the basics. Let's see how it fares in our review.

BUILD AND COMFORT

Build and design is one area where the Dizo Buds Z truly shines. For the price, the Dizo Buds Z comes with an attractive design and reliable build quality. The Dizo Buds Z has a pebble-shaped charging case with a matte texture that feels more premium than other buds in this price range with their glossy textures. The pastel green colour variant which we got is easy on the eyes. The case is very compact. The front of the case houses an LED battery indicator and the DIZO logo while the bottom features a USB-C charging port.

The earbuds have a stem design and feature a glossy texture in contrast to the case's matte texture. The stems or stalks have a lovely iridescent finish that makes the buds stand out. The buds are also super lightweight at merely 3.7g each and this translates to hours of comfortable usage.

FEATURES

Priced at ₹1,999, the Dizo Buds Z don't boast of a plethora of features as seen on earbuds in the 2.5K to 5K price range. However, they do come with the basics such as app support, IP rating, and a few others. The Dizo Buds Z can be used with the Realme Link app that allows users to perform certain functions. You can check the battery levels of your earbuds at a glance, switch between three EQ presets, perform firmware upgrades and customise earbud controls.

There are no volume controls, which is disappointing since some competitors do offer that. Within the app, you can also toggle on/off game mode, volume enhancer, and auto-answer.

The earbuds are IPX4 water-resistant, so they can easily withstand sweat or light splashes of water, making them suitable to use when exercising. You also get 88ms low latency game mode, as we mentioned before, which is a good addition for those who consume a lot of content or play a lot of games using earbuds.

PERFORMANCE

The Dizo Buds Z are equipped with 10mm dynamic drivers. The buds are powered by Bluetooth v5.0. The buds only supports the SBC codec while competitors such as the Soundcore R100 and Oppo Enco Buds support SBC as well as AAC. All that aside, the Dizo Buds Z has a warm sound signature with a boosted bass response that many will enjoy. The sub-bass is boosted quite a lot. There's a massive spike in the low-bass region that can cause some muddiness in the bass region. However, the upper bass region from 125Hz to 250Hz is well-represented and sounds pretty decent.

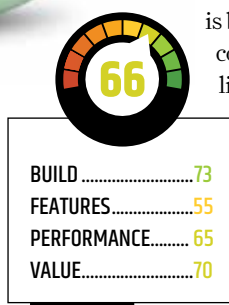

The mids and highs up until 8kHz are massively boosted so they are up and front in the mix. That means vocals and lead instruments are very

prominent when listening to music. The Dizo Buds Z provides an enjoyable listening experience at this inexpensive price point, but if you can stretch your budget by a little, the Realme Buds Q2 offer a more balanced sound.

As for the microphone, the Dizo Buds Z, equipped with Environmental Noise Cancellation, come with mediocre microphone performance that usually works well in indoor settings.

BATTERY LIFE

One area that has disappointed us is battery life. The Dizo Buds Z come with a lacklustre battery life of 16 hours in total, buds and case combined. This looks rather paltry in front of competitors such as the Soundcore R100 that comes with 25 hours of total playtime, and the Oppo Enco Buds with its 24-hour-long battery life.

VERDICT

The TWS market is chock-full of affordable options and the Dizo Buds Z may find itself slightly lost in the crowd. The earbuds definitely get most things right, be it the consumer-friendly bass-boosted sound signature, eye-catching design, comfortable fit, and app support. However, it loses out to its competitors in some key areas such as battery life, microphone performance, and audio codec support. Additionally, if a consumer decides to spend a few hundred rupees more, the world of Active Noise Cancellation and other appealing features is opened up to them.

—Dhriti Datta

SPECIFICATIONS

COLOURS: Onyx, Leaf, Pearl | **WEIGHT:** 3.7g (each earbud) | **NOISE CANCELLATION:** Noise cancellation for calling | **DRIVER SIZE:** 10mm dynamic driver | **FREQUENCY RANGE:** 20Hz - 20kHz | **BLUETOOTH VERSION:** 5.0 | **CODEC SUPPORT:** SBC | **APP SUPPORT:** Yes, Realme Link app | **GAMING MODE:** Yes, 88ms | **BATTERY LIFE:** 16 hours (4.5 hours on earbuds alone) | **FAST CHARGING:** 10 minutes provides 1.5 hours battery life
