PlayGo BH47

Affordable Active Noise Cancellation cans

PlayGo's latest offering, the PlayGo BH47 is an Active Noise Cancelling pair of over-ear Bluetooth headphones priced at ₹6,999. The headphones launched at the 7K price point but can now be purchased for as low as 4K on e-commerce websites such as Amazon, which is a steal deal, on paper at least. Let's find out more about the PlayGo BH47 and if they make a splash in the entry-level wireless headphone market.

BUILD AND COMFORT

The PlayGo BH47 finds the right balance between minimalism and flair. The cans come in an all-plastic build with a matte texture and silver highlights around the earcups. The headphones weigh approximately 260 grams and feel pretty lightweight when worn. The ear cushions feature soft, padded foam topped with faux-leather material. The generous foam padding ensures a comfortable fit. Now, the ear cups do get hot around the ears after some time of listening.

The cups swivel 90-degrees, allowing you to swivel it flat when not in use. The headphones also have metal-reinforced extendable arms to fit heads of various sizes. The extendable arms can be adjusted quite a lot but the mechanism that extends them feels a bit rickety and cheap.

Inside the headphone's retail box, you also get a micro-USB charging cable, an AUX cable with an L-shaped end, and some documentation.

As for controls, you can get a multifunction button for pausing/playing music, answering calls, and waking the voice assistant. There are volume up and down buttons that can also switch tracks by long-pressing. Apart from these buttons, the right earcup also houses the micro-USB charging port. We wish the headphones had Type-C charging since micro-USB is awfully dated in 2021.

On the left, you have a toggleable Active Noise Cancellation switch and a 3.5mm audio port for passive listening.

FEATURES

Owing to the inexpensive price of the cans, the PlayGo BH47 isn't a feature-rich wireless headphone. However, it does possess one feature which is probably the most sought-after feature in audio products currently – Active Noise Cancellation.

Active Noise Cancellation performance on these headphones is strictly mediocre. The PlayGo BH47 suppresses low-end, constant sounds to some degree. However, other sounds such as high-speed fans, typing on mechanical keyboards and human voices barely see any suppression and can be heard clear as day.

The wireless connection is stable but you will experience slight latency when watching content on OTT platforms or playing games on your phone. One of the best features of these headphones is multipoint connectivity that allows users to connect to two separate source devices simultaneously.

PERFORMANCE

The PlayGo BH47 packs 40mm EBEL

drivers that provide a fairly balanced sound signature. The earphones only support the SBC codec. At this range, we're used to the sound signature being too bass-biased, so it was refreshing to see that PlayGo hasn't gone down that route, since it usually results in muddy and dark sound, which we're not fans of. Instead, you get a pretty balanced sound signature with a slight boost in bass response. The soundstage is slightly closed off. Also, the PlayGo Bh47's audio does suffer from some bleeding, so people around you may be able to hear what you're listening to.

BATTERY LIFE

The PlayGo BH47's wireless playtime is rated at 30 hours (without ANC) and 23 hours (with ANC) by the company.

These are some pretty good numbers and you should have no problem using these cans for days from a single charge, provided that you use your headphones for about 5-6 hours per day.

In our testing, the PlayGo BH47 lasted 21 hours and 20 minutes on a single charge with ANC turned on and volume levels set to 60 per cent.

VERDICT

The PlayGo BH47 is a great entry-level on-ear wireless headphone for those who want to experience some ANC goodness without breaking the bank. The headphones also offer a fairly balanced sound profile with dynamic bass response and detailed mids. We're not fans of the dated micro-USB charging though. Battery life, however, is pretty stellar, providing most users with a few days to a week's worth of usage without having to reach for the charging cable.

—Dhriti Datta

SPECIFICATIONS

WEIGHT: 260g | CABLE LENGTH: 1.2m | HEADPHONE TYPE: over-ear | CONNECTIVITY: Bluetooth v5.0 | RANGE: 10m | BATTERY LIFE: 30 hours (without ANC)
