Dell Latitude 9520

Serious business

The Dell Latitude 9520 is quite an odd laptop. It is a small laptop but not exactly thin and light, it is tuned to deliver business-class performance but features a fairly mediocre front-facing camera for online meetings. Let's see if it's worth the 2.12 lakh price tag.

DESIGN, BUILD, TRACKPAD AND SPEAKERS

In 2021 most OEMs want their laptops in a 16:10 aspect ratio, making them look more square-ish. However, the Dell Latitude 9520 looks more rectangular. In terms of fit and finish, Dell always delivers and this time it's no different. The Dell Latitude 9520 has an aluminium chassis and everything in this laptop from its hinge to the trackpad is sturdy.

The keys feel sturdy and they have a decent amount of travel. Our only complaint with the Dell Latitude 9520 keyboard's would be the squeaking sound its keys sometimes make.

The Dell Latitude 9520 is a laptop that you'd use for business purposes including online meetings. It comes with a set of powerful speakers that are loud and have pretty good bass. Speaking of online meetings, we were disappointed by the 0.9MP front-facing camera. It is serviceable at best and does not justify the 2.12 lakh price tag.

PERFORMANCE

The Dell Latitude 9520 is based on Intel's Core vPro platform. This laptop prioritizes security and battery life. In terms of security, the Dell Latitude 9520 comes with Windows Hello face log-in and a fingerprint sensor located over the power button. The fingerprint reader is fast and accurate but doesn't automatically log you in when you press the power button.

BUILD AND DESIGN...	91
FEATURES.....	84
PERFORMANCE.....	65
VALUE.....	80

Moving on to the synthetic benchmarks, while running the Cinebench R23 we found that the 11th Gen Core i7-1185G7 has a good single-core score of 1349 and a multi-core score of 4006. In Cinebench R20, the 11th Gen Intel Core-i7 1185G7 scored 1625, which is pretty

decent and the laptop should have no trouble performing most productivity and office tasks.

To test the battery life, we ran the everyday productivity test in the PC Mark 10 while keeping battery performance at maximum and brightness at 100 per cent. At the end of this result, the laptop returned a battery life of 8h 44m, which is pretty impressive.

The Dell Latitude 9520 comes with a 256GB SSD and it has a read and write speed of 2486MB/s and 973MB/s respectively. In real-world performance, the Dell Latitude 9520 returned great numbers. It transferred a 35GB file from a phone to the laptop in 18 mins and took 2 min 33 seconds to make a copy of the same.

As for gaming, while running games like Valorant at 1080p resolution and low graphics settings, the laptop maintained around 85FPS and while playing Shadow of the Tomb Raider at 1080p and lowest graphical setting, the laptop returned 21 FPS.

In everyday usage, the Dell Latitude 9520 is pretty great. Thanks to the 32GB DDR4 memory the laptop

comes with, you can open multiple tabs open and the machine will perform really well.

DISPLAY

During our tests, we found that the laptop has 478.1 nits of brightness. However, it has a pretty high black luminance of 1.187 nits. As a result, shadows and black colour, in general, are relatively less appealing on Dell Latitude 9520. Furthermore, in the ColorChecker analysis, the Maximum DeltaE value came out to be 10.4 and the average DeltaE value was around 4.3. It means that the Dell Latitude's display is not colour accurate. However, since the use case for this laptop is to act as a business laptop and not as a video editing machine, so this is not a big issue.

The Dell Latitude's screen has a 60Hz refresh rate and a 1920 x 1080p display. We'd have loved at least a 1400p display here or a higher refresh rate. Nonetheless, overall, the Dell Latitude's screen is decent for everyday usage.

VERDICT

The Dell Latitude 9520 is a no-nonsense business laptop designed to deliver high computational performance and long battery life. Thankfully, it does these things very well. It is a great laptop for video conferencing thanks to a set of powerful speakers, it is a great machine to use for presentations thanks to its long battery life. The Dell Latitude 9520 is a well-designed laptop and stands out from the competition in terms of build quality and specs but suffers due to a poor front-facing video camera.
