

Blizzard: Infinite delay

Blizzard has once again delayed Overwatch 2 and Diablo IV. This time for an indefinite period of time. <https://digit.in/nov21-80>

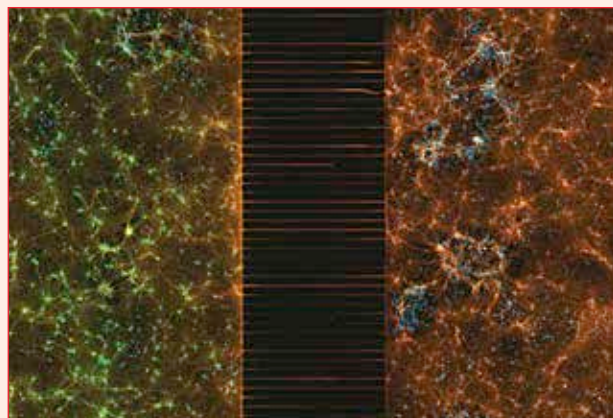

Skyrim : The Board Game

Modiphius Ent is making a boardgame which will allow you to revisit Tamriel's frozen north. <https://digit.in/nov21-81>

Every year the Nikon Small World microphotography competition showcases the most spectacular images of our world in the tiniest scales, captured by cutting edge imaging technologies.

↑ This microfluidic device has two separated populations of 300,000 networking neurons bridged by nerve fibers or axons, which are the orange lines between the two populations. The neurons on each side of the device have been “treated” with a unique virus.

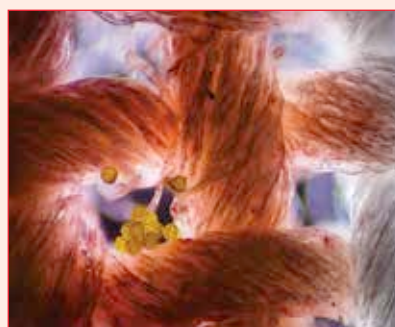

← Here is a single sensory neuron from the brain of an embryonic rat, under 10x magnification.

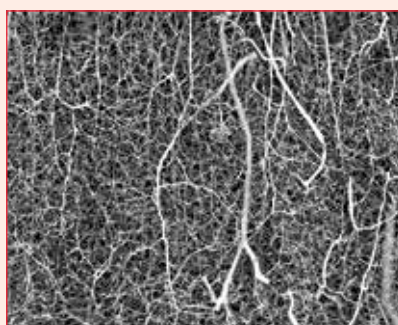

← Hello there! This is just the head of a tick.

← This is the proboscis of a housefly under 40x magnification, which is the long flexible mouthpart that partially dissolves and digests food matter before it is sucked up by the fly.

← Shown here are pollen grains stuck in a cotton fabric. A combination of stacking and darkfield microscopy, which uses both electrons and photons was used to produce the image.

← This 3D image of the vasculature or the arrangement of blood vessels in a mouse brain. The 3D representation has been derived by stacking a number of two dimensional slices.

← This is the network of neurons surrounding the mouth parts of a juvenile starlet sea anemone. The image has a 20x magnification and was captured in vivo.
