

XGIMI Elfin

The XGIMI brand has been making waves in the Indian market for a couple of years now thanks to their ultra-portable, ultra-bright and ultra smart range of projectors. Now they have upped the ante a bit more with the launch of their latest projector, the XGIMI Elfin. Featuring a minimalist, compact and flat design, the Elfin is more portable than most projectors out there, especially considering the myriad of features it comes with. First off, it can project an image at Full HD resolution and is touted to be the brightest home projector out there in this particular segment. It's

not lacking when it comes to the sound either. Within its compact body, the Elfin manages to pack in two 3 Watt Harmon Kardon speakers with DTS and Dolby Audio certifications. In terms of smarts, this projector comes with Intelligent Obstacle Avoidance systems that will detect any objects on the area being projected on and accordingly change the ratio and size of the projection to avoid overlapping. It also has Intelligent Screen Alignment, Auto Keystone Correction and Auto Focus which ensure the projected image is the best it can possibly be without any input from the user. The projector has been launched in India at ₹79,999.

2022 Norton V4SV

Acquired by TVS in early 2021, the Norton brand has been on hold in terms of launching a new bike. It seems they had been fixing the inherent problems with the previous bikes and used that knowledge to come up with something special. That special something has now been revealed in the form of the Norton V4SV superbike. This stunning piece of machinery replaces the older V4SS model and brings in a host of reliability and manufacturing changes. Featuring a heavily revised version of the 1200cc V4, the engine develops a cool 185bhp of power at 12,500rpm and 125nm of torque. To shed some weight, most of the bike features carbon fibre bodywork while the chassis is now an aluminium tube frame. It features suspension from Ohlins with the NIX30 forks up front and the TTX GP in the back. In terms of stopping power, the bike has dual 330mm floating disks with Brembo's radial-mounted monobloc calipers on the front wheel while the rear gets a 245mm disc and caliper. It is loaded with electronics as well with the V4SV getting Wet, Road and Sport engine modes, Lean-angle sensitive traction control, quick shifter, Auto Blipper and a full-colour 6-inch display.

2022 Lexus LX

The luxury car arm of Toyota, Lexus, needed an appropriately luxurious SUV based on the next-gen Toyota Land Cruiser that was launched earlier this year. Sharing the same underpinnings and chassis, the new 2022 LX is Lexus's new SUV flagship. With the LX, Lexus has created a beast that not only takes off-roading seriously but does so in an oh-so-luxurious way. But first, let's talk about what is powering this machine. At its heart is not a thumping great V8 as one would expect from a big SUV like this but a 3.4 litre twin-turbo V6 that produces 409bhp. It also features a 10-speed automatic gearbox which we have seen on the Land Cruiser. The interior is where most of the luxuriousness of the LX lies. The abundance of premium materials such as quilted leather upholstery, wood trimmings and chrome makes it one cosy place to be. Gone are the knobs and dials that we used to control aspects of the car. This one comes

with 3 touch screen displays. Each for a different purpose. It also has a 25 speaker system from Mark Levinson. Yes, you read that right. 25!
