

Nikon Z9

With the recent launch of the Sony A1 and Canon's R3, Nikon was lagging behind when it came to the professional mirrorless camera segment of the market. But with the Z9, Nikon has played their move and made it even more difficult to find a definite winner in the professional mirrorless camera shootout. The Z9 features a 45.7MP stacked CMOS sensor with 12 times faster image reading than any previous camera from Nikon. It also has in-camera recording resolutions of 4K at 30/60/120p and a maximum

video resolution of 8K at 30p. Nikon also touts a bunch of firsts with this camera like first 4-axis vertical and horizontal tilting display and the first truly blackout-free electronic viewfinder. It also boasts the fastest still image capturing at 120 frames per second. The new EXPEED 7 image-processing engine also enables deep learning which enables the Z9 to automatically detect and track focus on a variety of subjects ranging from vehicles, humans, and wildlife along with fast-moving objects such as birds and aircraft. All this performance does come at a price though, with the Nikon Z9 coming in at a cool \$5499 and is available for pre-order now.

Alienware Aurora R13

Featuring Intel's newly released 12th Gen Adler Lake chipset is the new Alienware Aurora R13 gaming desktop that showcases its brand new Legend 2.0 chassis boasting more internal space that Alienware claims better cooling and airflow. The desktop can be configured with anything from Intel's Core i5-12600KF to the i9-12000KF and there is also the option to choose from a plethora of Nvidia graphics cards. It can also support DDR5 RAM up to 128GB and it has the option to install the Alienware Cryo-Tech Special Edition CPU liquid cooler. With the R13, Alienware has adopted a philosophy of designing the desktop from the inside out making it look clean and sleek on the inside as well as on the outside. To that end, the R13 has an optional scratch-resistant clear side panel that offers a view into the dual-zone RGB AlienFX-lit interior. In terms of power, the Aurora R13 offers an optional 750W platinum-rated PSU which efficiently delivers and maintains power to the system. Overall, the system is designed for the best gaming performance in any configuration and is priced starting at \$1479.99.

Cabasse Pearl Pelegrina

For a while now, the Devialet Phonom series speakers were the undisputed king in the high-end speaker segment. But the Pearl Pelegrina from Cabasse might be a worthy challenger. Unveiled at their 70th anniversary, the Pearl Pelegrina are Cabasse's flagship in the connected speaker range and only 70 pairs will ever be built. Getting its name from the 55-carat pearl found in 1913, the Pearl Pelegrina is built to satisfy even the most demanding of audiophiles featuring a tri-coaxial speaker in the spherical body that has a 42cm diameter. It also has 30 cm patented HELD drivers that are touted to provide the ultimate immersive and acoustic experience. The otherworldly design comes thanks to the

brand's team in Brittany, standing in at 130cms tall and showing off exclusive materials and custom-built parts. Each pair comes with numbered plaques on the base as it has a limited edition run and each pair is tested in the brand's proprietary anechoic chamber before leaving the workshop. It also features a touch of modern, with ethernet, Wi-Fi, Bluetooth and USB connectivity along with support for all major streaming services like Spotify, Tidal and Deezer.
